

## The ontogeny of learning and memory

The ontogeny of learning and memory is a well-developed field that goes back at least 50 years, beginning with the discovery that rats show "infantile amnesia" (Campbell & Campbell, 1962; Campbell & Spear, 1972). The discovery that rodents show poor long-term memory for experiences occurring in infancy suggested that the human phenomenon has a biological basis. This discovery stimulated a long history of research on learning and memory in developing animals and humans. Basic forms of learning were demonstrated at earlier and earlier stages of development, including *in utero*, and the development of multiple brain memory systems. Age-specific ecological adaptions, and acquisition-*vs.*-expression of learning emerged as prominent themes in investigation of the ontogeny of learning and memory. This history is summarized in several edited books (Bloomberg, Freeman, & Robinson, 2010; Kail & Spear, 1984; Krasnegor, Blas, Holte, & Smotherman, 1986; Shair, Barr, & Holte, 1991; Spear & Campbell, 1979). A late-breaking theme in this history, particularly in developmental behavioral neuroscience, is adolescent development (Spear, 2009). This remains an important new area for research on the neural basis of learning. Thus, in this Special Issue we feature recent studies on the neurobiology of learning and memory during adolescence, as well as other new and timely studies pertaining to other periods of development.

In addressing the relationship between neurobiological and behavioral changes specifically during the adolescence period, DePasquale & Galvan discuss how alterations in fronto-striatal systems during adolescence impact risky decision making and vulnerability to social pressures, which may ultimately provide a framework for the development of reward-related learning abilities. Relatedly, Meyer and Bucci describe a line of research in rats that examined the development of proactive inhibitory processes and dependence on balanced activity in fronto-striatal circuits. Baker and Richardson describe the involvement of NMDA glutamate receptors in impairments in fear extinction during adolescence, and how the role of NMDA receptors may differ during this stage of development compared to adults and juveniles. Robinson-Drummer et al. describe the results of an experiment that tested the involvement of muscarinic cholinergic receptors in prefrontal cortex in a configural form of contextual fear learning and memory in adolescents. Holte and colleagues describe a growing body of work regarding the maturation of cortical noradrenergic systems and the contribution to executive function. Finally, Madsen and colleagues present data from adult and adolescent rats indicating that extinction training during abstinence from cocaine self-administration is effective in reducing cue-induced drug seeking after long periods of abstinence.

Pattwell and Bush review a growing literature on the development of emotional learning, with an emphasis on how neurobiological changes during development impact the ability to learn and express emotional responses and stress. Relatedly, Debiec and Sullivan describe evidence that threat learning during infancy is regulated by environmental factors, such as maternal behavior, in addition to being dependent on the maturation of the amygdala. Guskjolen and colleagues complement this work by describing age-related differences in the ability to remember spatial information, specifically focusing on mice and relating their findings to humans and rats. Related to the role of the developing hippocampus in learning and memory abilities, Goldsberry and colleagues describe the results of a study that examined age-related changes in hippocampal neural activity during eye blink conditioning, and its reliance on sensory system development. Finally, Claffin and colleagues describe adverse effects of developmental glucocorticoid exposure on hippocampus-dependent trace eye blink conditioning in juvenile rats.

**Ontogeny of Learning and Memory (PLE: Memory)** Norman E. Spear,Byron A. Campbell,2014-05-09 Originally published in 1979 this volume contains chapters prepared following a conference at SUNY Binghamton in 1977 The conference was the outcome of exciting new developments that had occurred in the ontogeny of learning and memory at the time as well as a long standing friendship between the editors Many changes had taken place in the years leading up to this volume and there were now many more researchers active in the field This volume reflected the rapidly changing state of this research area at the time and includes early contributions from researchers now well established in the field

web dec 24 2013 love the anime and the manga but not this disc set the japan with english subtitles doesn t work for either  
disc and as with 99 of the anime produced the english dubbing is horrible what the actors say doesn t match the text below it  
i did try the discs on different machines but it still doesn t work
