Building Enterprise Systems with ODP Peter F. Linington, Zoran Milosevic, Akira Tanaka, Antonio Vallecillo, 2011-09-06
The Reference Model of Open Distributed Processing RM ODP is an international standard that provides a solid basis for describing and building widely distributed systems and applications in a systematic way. It stresses the need to build these systems with evolution in mind by identifying the concerns of major stakeholders and then expressing the Open Distributed Processing.
Distributed Processing K. Raymond, L. Armstrong, 2013-06-05 Open Distributed Processing contains the selected proceedings of the Third International Conference on Open Distributed Systems organized by the International Federation for Information Processing and held in Brisbane Australia in February 1995. The book deals with the interconnectivity problems that advanced computer networking raises, providing those working in the area with the most recent research, including security and management issues.

Open Distributed Processing and Distributed Platforms Jerome Rolia, Jacob Slonim, John Botsford, 2016-01-09 Advances in computer networking have allowed computer systems across the world to be interconnected. Open Distributed Processing ODP systems are those that support heterogeneous distributed applications both within and between autonomous organizations. Many challenges must be overcome before ODP systems can be fully realized. This book describes the recent advances in the theory and practice of developing, deploying, and managing open distributed systems. Applications of these systems include, but are not limited to, telecommunication, medical, and large scale transaction processing and electronic commerce systems. All of these are currently developed on distributed platforms. For anybody working in industry or research in this field, Open Distributed Processing and Distributed Platforms will prove an invaluable text.

Information Technology Standards Australia (Organization), 2006-01-01 Open Distributed Processing Jan de Meer, Volker Heymer, Rudolf Roth, 1992 Open Distributed Processing is a central field in the standardization activities of ISO and CCITT. This volume presents important cornerstones related to ODP: an introduction to the ISO Basic Reference Model providing the framework for future standards in the area of ODP; the architectural implications of ODP; the methods and techniques to model information needs in enterprises; a report on the CCITT studies on Intelligent Networks for new telecommunication services; a report on the Telecommunication Information Networking Architecture Initiative for the synergy between computing and telecommunication; and the fundamental concepts for object oriented design based on formal descriptions.

A Type Management System for Open Distributed Processing Wayne Brookes, Jadwiga Indulska, 1994 Abstract A goal of Open Distributed Processing ODP is to allow the interconnection of existing heterogeneous systems and to support the introduction of new services at run time to allow for system evolution. One of the greatest problems in achieving this goal is managing the heterogeneity of the environment. The Reference Model of Open Distributed Processing RM ODP introduces a Type Repository function as a support for overcoming this problem by providing a framework for describing and relating the types of information services and entities in an open distributed system. This report

presents a brief overview of type description and type management in RM ODP and focuses on the development of a type model and strategies for type management for use in an open distributed environment It considers related approaches in object oriented databases persistent programming and distributed system architectures and evaluates them with respect to the requirements of ODP It further considers issues related to the construction of a Type Manager providing tools for type description and type management to operate in an open distributed environment *Open Distributed Processing, II* Jan de Meer, Bernd Mahr, Silke Storp, 1994 Concentrates on informatics in medicine covering topics such as trader trading distributed systems quality of multimedia services distributed applications and Open Distributed Processing design and modelling concepts

Welcome to Middleware 98 and to one of England's most beautiful regions In recent years the distributed systems community has witnessed a growth in the number of conferences leading to difficulties in tracking the literature and a consequent loss of awareness of work done by others in this important field The aim of Middleware 98 is to synthesise many of the smaller workshops and conferences in this area bringing together research communities which were becoming fragmented The conference has been designed to maximise the experience for attendees This is reflected in the choice of a resort venue rather than a big city to ensure a strong focus on interaction with other distributed systems researchers The programme format incorporates a question and answer panel in each session enabling significant issues to be discussed in

the context of related papers and presentations The invited speakers and tutorials are intended to not only inform the attendees but also to stimulate discussion and debate

A Formal Approach to an Architecture for Open Distributed Processing Andreas Vogel, 1994 Abstract Open Distributed Processing ODP provides an open architecture for distributed systems ODP is subject of an ongoing international standardization by ISO and ITU T The formal description techniques LOTOS SDL Z

and Mondel are investigated for their suitability to define ODPs sic architecture formally resulting in the selection of LOTOS
The LOTOS sub language approach is introduced and developed This approach is based on the idea of mapping ODPs
architectural concepts and structures on LOTOS templates and the relationships between them respectively A software
engineering technology for tools supporting this approach is provided
