*Organometallics in Process Chemistry* Ahmed F. Abdel-Magid, 2004-06-15 The design of efficient syntheses of medicinal agents is one of the prime goals of the process chemist in the pharmaceutical industry. The expanding list of metal mediated reactions has had a major impact on this endeavor over the last two decades. This volume will highlight some of the areas of organometallic chemistry that have played a particularly important role in development. The chapters are written by chemists who work in the process groups of major pharmaceutical companies and fine chemical manufacturers. Having demonstrated the power of organometallics in their processes, the authors herein expand upon their experiences with examples from the literature as reported by process groups within the industry. The chapters are organized either by the application of a particular metal or reaction class. Removal of the residual metal(s) from the isolated active pharmaceutical ingredient API is key to the release of the material for human consumption and hence is reviewed here as well. This volume of *Topics in Organometallic Chemistry* is presented to offer a representative cross section of organometallic applications in the pharmaceutical industry as well as to give an appreciation for the creativity possible in process chemistry.

*Organometallics in Process Chemistry* Thomas J. Colacot, Vilvanathan Sivakumar, 2020-04-01 This volume gives an overview of the applications of organometallic chemistry in process chemistry relevant to the current topics in synthetic chemistry. This volume starts with an introduction on the historical development of organometallics in process chemistry and is followed by chapters dealing with the last five years development in various organometallic reaction types such as the challenging cross coupling process construction of 3-1-0 bicycles, pressure and transfer hydrogenations of historically challenging compounds such as esters, utilization of carbon dioxide for making organic compounds by flow process drug synthesis and metal detection and scavenging in the finished APIs. A chapter by Colacot et al is also devoted to the process development and structural understanding of organometallic catalysts with particular emphasis to  $\text{LnPd}_0$  catalysts. An academia-industry collaborated chapter on the use of water as a solvent for organometallic processes is included in this book.
