## **Orthopaedic Decision Making:**

*Essential Paediatric Orthopaedic Decision Making* Benjamin Joseph, Selvadurai Nayagam, Randall Loder, 2022-06-28 This collection of practical Case reports provides a concise guide to managing a wide spectrum of orthopaedic conditions in children. Strategies for determining an optimum management approach to follow in any given situation are provided and are supported with clinical illustrations and guidelines. Sixty challenging clinical scenarios are presented from malunion of a tibial fracture to pseudarthrosis of the tibia after failed primary surgery. Each case is approached in a systematic manner with a background history, key features of physical examination and a series of questions. The questions lead to the goals of surgery followed by a list of options for the management of each case. The option chosen by the surgeon is then presented usually with intraoperative clinical and radiographic illustrations. The majority of cases have substantial follow up to illustrate the wisdom of the surgical decision making, the surgical skill employed and the diligent post operative care and follow up. Trainees in pediatric orthopaedics and those sitting their final specialty examination will find this Case based approach helps to anchor both their understanding and retention of key concepts.

*Paediatric Orthopaedics* Benjamin Joseph, Selvadurai Nayagam, Randall Loder, Ian Torode, 2016-01-05 Mastering the art and science of paediatric orthopaedics entails the acquisition of theoretical knowledge, the development of surgical dexterity and learning the process of clinical decision making. Of these three components, clinical decision making is arguably the most important. Featuring a practical focus,

*Paediatric Orthopaedics: A System of Decision Making* Robert W. Bucholz, 1984 **Orthopaedic Decision Making** Robert W. Bucholz, 1996 Not intended to provide strict pathways for the diagnosis and treatment of specific orthopedic problems but rather to provide a generic starting point or template for the creation of detailed decision trees which would be based on the treatment preferences and expertise of the individual practitioner. One hundred and twenty-eight contributions address the specific clinical problems of orthopedic trauma, reconstructive surgery, children's orthopedics, hand surgery, spine surgery and sports medicine.
