## New Fields And Strings In Subnuclear Physics:

**New Fields and Strings in Subnuclear Physics** Antonio Zichichi,2002    **New Fields and Strings in Subnuclear Physics** Antonino Zichichi,2002 In August September 2001 a group of 75 physicists from 51 laboratories in 15 countries met in Erice Italy to participate in the 39th Course of the International School of Subnuclear Physics This volume constitutes the proceedings of that meeting It focuses on the theoretical and phenomenological developments in string theory as well as in all the other sectors of subnuclear physics In addition experimental highlights are presented and discussed    **Proceedings of the International School of Subnuclear Physics** Antonino Zichichi,2003    **String Theory Research Progress**

Ferenc N. Balogh,2008 String theory is a model of fundamental physics whose building blocks are one dimensional extended objects called strings rather than the zero dimensional point particles that form the basis for the standard model of particle physics The phrase is often used as shorthand for Superstring theory as well as related theories such as M theory By replacing the point like particles with strings an apparently consistent quantum theory of gravity emerges Moreover it may be possible to unify the known natural forces gravitational electromagnetic weak nuclear and strong nuclear by describing them with the same set of equations Studies of string theory have revealed that it predicts higher dimensional objects called branes String theory strongly suggests the existence of ten or eleven in M theory space time dimensions as opposed to the usual four three spatial and one temporal used in relativity theory
