web in mathematics a differential equation is an equation that relates one or more unknown functions and their derivatives 1 in applications the functions generally represent physical quantities the derivatives represent their rates of change and the differential equation defines a relationship between the two

differential equation formula meaning formulas solved - Jun 07 2022

web some differential equation formula examples for some function  $g$  find another function  $f$  such that  $\frac{dy}{dx} = f(x)$  where  $y = f(x)$  this is the differential equation therefore an equation consisting of derivative or derivatives of the dependent variable with respect to the independent variable is called a differential equation
