Jain, Sergio R. López-Permouth**

## New Examples Of Frobenius Extensions:

*New Examples of Frobenius Extensions* Lars Kadison,1998 This volume is based on the author's lecture courses to algebraists at Munich and at Goteborg He presents for the first time in book form a unified approach from the point of view of Frobenius algebras extensions to diverse topics such as Jones subfactor theory Hopf algebras and Hopf subalgebras the Yang Baxter Equation and 2 dimensional topological quantum field theories

## **Associative and Non-Associative Algebras**

**and Applications** Mercedes Siles Molina,Laiachi El Kaoutit,Mohamed Louzari,L'Moufadal Ben Yakoub,Mohamed

Benslimane,2020-01-02 This book gathers together selected contributions presented at the 3rd Moroccan Andalusian Meeting on Algebras and their Applications held in Chefchaouen Morocco April 12 14 2018 and which reflects the mathematical collaboration between south European and north African countries mainly France Spain Morocco Tunisia and Senegal The book is divided in three parts and features contributions from the following fields algebraic and analytic methods in associative and non associative structures homological and categorical methods in algebra and history of mathematics Covering topics such as rings and algebras representation theory number theory operator algebras category theory group theory and information theory it opens up new avenues of study for graduate students and young researchers The findings presented also appeal to anyone interested in the fields of algebra and mathematical analysis

## *Modules and*

*Comodules* Tomasz Brzezinski,José Luis Gomez-Pardo,Ivan Shestakov,Patrick F. Smith,2008-06-26 The 23 articles in this volume encompass the proceedings of the International Conference on Modules and Comodules held in Porto Portugal in 2006 and dedicated to Robert Wisbauer on the occasion of his 65th birthday These articles reflect Professor Wisbauer's wide interests and give an overview of different fields related to module theory some of which have a long tradition whereas others have emerged in recent years They include topics in the formal theory of modules bordering on category theory in ring theory in Hopf algebras and quantum groups and in corings and comodules

## Extending Structures

Ana Agore,Gigel Militaru,2019-08-29 Extending Structures Fundamentals and Applications treats the extending structures ES problem in the context of groups Lie Leibniz algebras associative algebras and Poisson Jacobi algebras This concisely written monograph offers the reader an incursion into the extending structures problem which provides a common ground for studying both the extension problem and the factorization problem Features Provides a unified approach to the extension problem and the factorization problem Introduces the classifying complements problem as a sort of converse of the factorization problem and in the case of groups it leads to a theoretical formula for computing the number of types of isomorphisms of all groups of finite order that arise from a minimal set of data Describes a way of classifying a certain class of finite Lie Leibniz Poisson Jacobi associative algebras etc using flag structures Introduces new non abelian cohomological objects for all of the aforementioned categories As an application to the approach used for dealing with the classification part of the ES problem the Galois groups associated with extensions of Lie algebras and associative algebras are described

## *Ring Theory And*

*Algebraic Geometry* A. Granja, J.A. Hermida Alonso, A Verschoren, 2001-05-08 Focuses on the interaction between algebra and algebraic geometry including high level research papers and surveys contributed by over 40 top specialists representing more than 15 countries worldwide Describes abelian groups and lattices algebras and binomial ideals cones and fans affine and projective algebraic varieties simplicial and cellular complexes polytopes and arithmetics

**Algebra, Geometry and Mathematical Physics** Abdenacer Makhlouf, Eugen Paal, Sergei D. Silvestrov, Alexander Stolin, 2014-06-17 This book collects the proceedings of the Algebra Geometry and Mathematical Physics Conference held at the University of Haute Alsace France October 2011 Organized in the four areas of algebra geometry dynamical symmetries and conservation laws and mathematical physics and applications the book covers deformation theory and quantization Hom algebras and n ary algebraic structures Hopf algebra integrable systems and related math structures jet theory and Weil bundles Lie theory and applications non commutative and Lie algebra and more The papers explore the interplay between research in contemporary mathematics and physics concerned with generalizations of the main structures of Lie theory aimed at quantization and discrete and non commutative extensions of differential calculus and geometry non associative structures actions of groups and semi groups non commutative dynamics non commutative geometry and applications in physics and beyond The book benefits a broad audience of researchers and advanced students

**Algebra and Its Applications** Dinh Van Huynh, Surender Kumar Jain, Sergio R. López-Permouth, 2000 Among all areas of mathematics algebra is one of the best suited to find applications within the frame of our booming technological society The thirty eight articles in this volume encompass the proceedings of the International Conference on Algebra and Its Applications Athens OH 1999 which explored the applications and interplay among the disciplines of ring theory linear algebra and coding theory The presentations collected here reflect the dialogue between mathematicians involved in theoretical aspects of algebra and mathematicians involved in solving problems where state of the art research tools may be used and applied This Contemporary Mathematics series volume communicates the potential for collaboration among those interested in exploring the wealth of applications for abstract algebra in fields such as information and coding The expository papers would serve well as supplemental reading in graduate seminars

**Quasi-Hopf Algebras** Daniel Bulacu, Stefaan Caenepeel, Florin Panaite, Freddy Van Oystaeyen, 2019-02-21 This is the first book to be dedicated entirely to Drinfeld's quasi Hopf algebras Ideal for graduate students and researchers in mathematics and mathematical physics this treatment is largely self contained taking the reader from the basics with complete proofs to much more advanced topics with almost complete proofs Many of the proofs are based on general categorical results the same approach can then be used in the study of other Hopf type algebras for example Turaev or Zunino Hopf algebras Hom Hopf algebras Hopfish algebras and in general any algebra for which the category of representations is monoidal Newcomers to the subject will appreciate the detailed introduction to braided monoidal categories co algebras and the other tools they will need in this area More advanced readers will benefit from
