Multi-Digit Multiplication - Grade 4 Workbook Maria Miller,2016-01-31 Multi Digit Multiplication Workbook covers multi digit multiplication and some related topics It is suitable for students in fourth grade The focus is on multi digit multiplication also called algorithm of multiplication or multiplying in columns We start out by multiplying by whole tens and hundreds such as 20 4 or 500 6 After this is mastered we study a very important concept of multiplying in parts also called partial products algorithm It means that 4 63 is done in two parts 4 60 and 4 3 and the results are added This principle underlies all other multiplication algorithms so it is important to master We do not want children to

learn the multiplication algorithm blindly without understanding what is going on with it Multiplying in parts is also tied in with an area model which again is very important to understand Before showing the traditional form of multiplication the lesson Multiply in Columns the Easy Way shows a simplified form of the same which is essentially just multiplying in parts You may skip that lesson at your discretion or skim through it quickly if your child is ready to understand the standard form of the algorithm which is taught next Students also study estimation and multiplying with money Many kinds of word problems abound in all of the lessons Students are supposed to practice writing a number sentence for the word problems essentially writing down the calculating they are doing After that we multiply two digit numbers by two digit numbers Again we first study partial products and tie that in with an area model The lesson Multiplying in Parts Another Way is optional After that the standard algorithm for multiplying a two digit number by a two digit number is taught and the workbook ends
