**Parallel Rendering Symposium** ,1993 Parallel Computing on Distributed Memory Multiprocessors Füsün Özgüner,Fikret Ercal,2012-12-06 Advances in microelectronic technology have made massively parallel computing a reality and triggered an outburst of research activity in parallel processing architectures and algorithms Distributed memory multiprocessors parallel computers that consist of microprocessors connected in a regular topology are increasingly being used to solve large problems in many application areas In order to use these computers for a specific application existing algorithms need to be restructured for the architecture and new algorithms developed The performance of a computation on a distributed memory multiprocessor is affected by the node and communication architecture the interconnection network topology the I O subsystem and the parallel algorithm and communication protocols Each of these parameters is a complex problem and solutions require an understanding of the interactions among them This book is based on the papers presented at the NATO Advanced Study Institute held at Bilkent University Turkey in July 1991 The book is organized in five parts Parallel computing structures and communication Parallel numerical algorithms Parallel programming Fault tolerance and Applications and algorithms Design Considerations for Parallel Graphics Libraries Thomas W. Crockett,Institute for Computer Applications in Science and Engineering,1994 Abstract Applications which run on parallel supercomputers are often characterized by massive datasets Converting these vast collections of numbers to visual form has proven to be a powerful aid to comprehension For a variety of reasons it may be desirable to provide this visual feedback at runtime One way to accomplish this is to exploit the available parallelism to perform graphics operations in place In order to do this we need appropriate parallel rendering algorithms and library interfaces This paper provides a tutorial introduction to some of the issues which arise in designing parallel graphics libraries and their underlying rendering algorithms The focus is on polygon rendering for distributed memory message passing systems We illustrate our discussion with examples from PGL a parallel graphics library which has been developed on the Intel family of parallel systems **Proceedings** ,2002
