## **Multivariate Splines Cbmsnsf Regional Conference Series In Applied M:**

*Multivariate Splines*, 1988      Multivariate Splines Charles K. Chui, 1988-01-01 Subject of multivariate splines presented from an elementary point of view includes many open problems      **CBMS-NSF Regional Conference Series in Applied Mathematics**, 1977      **Multidimensional Minimizing Splines** R. Arcangéli, María Cruz López de Silanes, Juan José Torrens, 2004-06-24 This book is of interest to mathematicians geologists engineers and in general researchers and post graduate students involved in spline function theory surface fitting problems or variational methods From reviews The book is well organized and the English is very good I recommend the book to researchers in approximation theory and to anyone interested in bivariate data fitting L L Schumaker Mathematical Reviews 2005      New Perspectives on Approximation and Sampling Theory Ahmed I. Zayed, Gerhard Schmeisser, 2014-11-03 Paul Butzer who is considered the academic father and grandfather of many prominent mathematicians has established one of the best schools in approximation and sampling theory in the world He is one of the leading figures in approximation sampling theory and harmonic analysis Although on April 15 2013 Paul Butzer turned 85 years old remarkably he is still an active research mathematician In celebration of Paul Butzer s 85th birthday *New Perspectives on Approximation and Sampling Theory* is a collection of invited chapters on approximation sampling and harmonic analysis written by students friends colleagues and prominent active mathematicians Topics covered include approximation methods using wavelets multi scale analysis frames and special functions *New Perspectives on Approximation and Sampling Theory* requires basic knowledge of mathematical analysis but efforts were made to keep the exposition clear and the chapters self contained This volume will appeal to researchers and graduate students in mathematics applied mathematics and engineering in particular engineers working in signal and image processing      *Spline Functions and the Theory of Wavelets* Serge Dubuc, Gilles Deslauriers, 1999-01-01 This work is based on a series of thematic workshops on the theory of wavelets and the theory of splines Important applications are included The volume is divided into four parts Spline Functions Theory of Wavelets Wavelets in Physics and Splines and Wavelets in Statistics Part one presents the broad spectrum of current research in the theory and applications of spline functions Theory ranges from classical univariate spline approximation to an abstract framework for multivariate spline interpolation Applications include scattered data interpolation differential equations and various techniques in CAGD Part two considers two developments in subdivision schemes one for uniform regularity and the other for irregular situations The latter includes construction of multidimensional wavelet bases and determination of bases with a given time frequency localization In part three the multifractal formalism is extended to fractal functions involving oscillating singularities There is a review of a method of quantization of classical systems based on the theory of coherent states Wavelets are applied in the domains of atomic molecular and condensed matter physics In part four ways in which wavelets can be used to solve important function estimation problems in statistics are shown Different wavelet estimators are proposed in the following distinct cases

functions with discontinuities errors that are no longer Gaussian wavelet estimation with robustness and error distribution that is no longer stationary Some of the contributions in this volume are current research results not previously available in monograph form The volume features many applications and interesting new theoretical developments Readers will find powerful methods for studying irregularities in mathematics physics and statistics **Applied Mechanics Reviews** ,1989

**Curve and Surface Design** Hans Hagen,1992-01-01 This collection of ideas and results on topics of curve and surface design is intended for research in the academic environment as well as for practical use in industrial applications Main emphasis is on minimal energy splines and geometric spline curves and on techniques beyond tensor product surfaces
