Multidimensional Diffusion Processes:

Multidimensional Diffusion Processes Daniel W. Stroock, S.R.S. Varadhan, 1997-06-19 From the reviews This book is an excellent presentation of the application of martingale theory to the theory of Markov processes especially multidimensional diffusions This monograph can be recommended to graduate students and research workers but also to all interested in Markov processes from a more theoretical point of view Mathematische Operationsforschung und Statistik

Impulse Control of Multidimensional Diffusion and Jump Diffusion Processes Guoliang Wu, 2009 **Various Limiting Criteria for Multidimensional Diffusion Processes**, 2009 In this dissertation we consider several limiting criteria for dimensional diffusion processes defined as solutions of stochastic differential equations Our main interest is in criteria for polynomial and exponential rates of convergence to the steady state distribution in the total variation norm Resulting criteria should place assumption only on the coefficients of the elliptic differential operator governing the diffusion Coupling of Harris chains is one of the main methods employed in this dissertation **Extremes of Multidimensional Stationary Diffusion**

Processes and Applications in Finance, 2007 This thesis deals with the extreme behavior of multidimensional reversible diffusion processes The partial maxima of the process measured in a suitable norm are considered up to the time horizon T_0 The fine tail asymptotics of the maxima is evaluated for fixed T_0 as well as the long time behavior in the sense of classical extreme value theory The problem can be reduced to the analysis of spectral asymptotics for the generator of the process subject to Dirichlet boundary conditions on bounded domains which extend to the whole state space The results are applied to multidimensional diffusion processes in financial mathematics Multivariate short rate models are presented and their extreme behavior is explicitly analyzed In addition goodness of fit tests are developed taking into account the extremes in the data *Encyclopedic Dictionary of Mathematics* Nihon Sūgakkai, 1993 V 1 A N v 2 O Z Appendices and indexes **Basic**

Stochastic Processes Pierre Devolder, Jacques Janssen, Raimondo Manca, 2015-08-05 This book presents basic stochastic processes stochastic calculus including Levy processes on one hand and Markov and Semi Markov models on the other From the financial point of view essential concepts such as the Black and Scholes model VaR indicators actuarial evaluation market values fair pricing play a central role and will be presented The authors also present basic concepts so that this series is relatively self contained for the main audience formed by actuaries and particularly with ERM enterprise risk management certificates insurance risk managers students in Master in mathematics or economics and people involved in Solvency II for insurance companies and in Basel II and III for banks **Large Deviations and Laws of the Iterated Logarithm for**

Multidimensional Diffusion Processes with Applications to Diffusion Processes with Random Coefficients Bruno Remillard, Carleton University. Dissertation. Mathematics, ProQuest Co, 1987 Diffusion Processes and Partial Differential Equations Kazuaki Taira, 1988 This book provides a careful and accessible exposition of functional analytic methods in stochastic analysis It focuses on the relationship between Markov processes and elliptic boundary value problems and

explores several recent developments in the theory of partial differential equations which have made further progress in the study of Markov processes possible This book will have great appeal to both advanced students and researchers as an introduction to three interrelated subjects in analysis Markov processes semigroups and elliptic boundary value problems providing powerful methods for future research

Extremes of Multidimensional Stationary Diffusion Processes and Applications in Finance Andreas Kunz,2002 Functionals of Multidimensional Diffusions with Applications to Finance Jan Baldeaux,Eckhard Platen,2013-08-13 This research monograph provides an introduction to tractable multidimensional diffusion models where transition densities Laplace transforms Fourier transforms fundamental solutions or functionals can be obtained in explicit form The book also provides an introduction to the use of Lie symmetry group methods for diffusions which allows to compute a wide range of functionals Besides the well known methodology on affine diffusions it presents a novel approach to affine processes with applications in finance Numerical methods including Monte Carlo and quadrature methods are discussed together with supporting material on stochastic processes Applications in finance for instance on credit risk and credit valuation adjustment are included in the book The functionals of multidimensional diffusions analyzed in this book are significant for many areas of application beyond finance The book is aimed at a wide readership and develops an intuitive and rigorous understanding of the mathematics underlying the derivation of explicit formulas for functionals of multidimensional diffusions
