Thalmann, 2003-05-20 The CAPTECH 98 workshop took place at the University of Geneva on November 26 27 1998 sponsored by FIP Working Group 5 10 Computer Graphics and Virtual Worlds and the Suisse Romande regional doctoral seminar in computer science The subject of the conference was ongoing research in data capture and interpretation The goals of capturing real world data in order to perceive understand and interpret them and then reacting to them in a suitable way are currently important research problems These data can be very diverse sounds emotions shapes motions forces muscles actions etc Once captured they have to be treated either to make the invisible visible or to understand a particular phenomenon so as to formulate an appropriate reaction or to integrate various information in a new multimedia format The conference included six sessions of presented papers and three panel discussions Invited speakers treating various aspects of the topic were Professor R Earnshaw from Bradford University Professor T L Kunii from Hosei University and Professor P Robert from EPFL Professor K Bauknecht of the University of Zurich President of IFIP offered the welcoming address Mr E Badique project officer for the EU in Brussels discussed recent results of the EU ACTS research program Finally the Geneva Computer Animation 98 Film Festival highlighted the evening of November 26

Cyberworlds Toshiyasu L. Kunii, Annie Luciani, 2012-12-06 The worlds synthesized in the cyberspaces of networked computers are the theme of *Cyberworlds* Cyberspaces have come into prominence with the development of the Internet and are expected to expand drastically with the emergence of national and international information systems The purpose is to discover the architecture and design of cy of the book *Cyberworlds* berworlds by synthesizing worlds in cyberspaces The underlying philosophy is crucial to the success of the architecture and an initial effort is made to delineate it at the beginning of the book The book's topics are selected to clarify the issues of the philosophy architecture and design of cyberworlds through a wide variety of case studies The approach presented in the book is thus characterized as synthetic rather than analytic There already are numbers of books with observations and analyses of cyberworlds They warn of the danger of widespread crimes and accidents in the cyberworlds for instance Without a philosophy and methodologies of how to architecturally design and synthesize the cyber worlds the worlds in cyberspaces tend to be arbitrarily extended disordered and in extreme cases criminal This book is intended to benefit readers by providing them with a possible direction to take in deciding how to synthesize worlds in cyberspaces Creating new worlds in new spaces with almost unlimited dimension and scale is an immense challenge In principle anyone at any moment can participate in the creation The book serves as a creator's reference and also as a design guidebook

Introduction Imagine a virtual world with digital creatures that looks like real life sounds like real life and even feels like real

life Imagine a virtual world not only with nice three dimensional graphics and animations but also with realistic physical laws and forces This virtual world could be familiar reproducing some parts of our reality or unfamiliar with strange physical laws and artificial life forms As a researcher interested in the sciences of complexity the idea of a conference about virtual worlds emerged from frustration In the last few years there has been an increasing interest in the design of artificial environments using image synthesis and virtual reality The emergence of industry standards such as VRML 1 is an illustration of this growing interest At the same time the field of Artificial Life has addressed and modeled complex phenomena such as self organization reproduction development and evolution of artificial life like systems 2 One of the most popular works in this field has been Tierra designed by Tom Ray an environment producing synthetic organisms based on a computer metaphor of organic life in which CPU time is the energy resource and memory is the material resource 3 Memory is organized into informational patterns that exploit CPU time for self replication Mutation generates new forms and evolution proceeds by natural selection as different creatures compete for CPU time and memory space
