Nikolski, 2012-12-06 This volume is devoted to some topical problems and various applications of operator theory and its interplay with modern complex analysis It consists of 30 carefully selected surveys and research papers The main subjects of the volume include free interpolation by analytic functions in its development from the pathbreaking works by L Carleson up to the most recent achievements and in its connections with the theory of singular integral operators and Carleson type embedding theorems moment problems etc Sz kefalvi Nagy Foias model spaces studied from the point of view of holomorphic spaces holomorphic spaces Hardy Bergman H lder and Sobolev spaces analytic functions smooth up to the boundary with their subtle properties related to the Nevanlinna Smirnov factorization division and multiplication and zero sets a new approach to weighted inequalities for singular integrals based on the Bellman function in optimization theory the uncertainty principle in harmonic analysis and in particular a complete version of Turan s lemma on trigonometric sums Hankel operators and stationary Gaussian processes Fourier multipliers and spectral analysis of some differential operators These themes are united by the operator theoretic ideology and systematic use of modern function theoretical techniques The book is dedicated to the memory of S A

Vinogradov It contains a bibliographical note with a lively portrait of S A Vinogradov a detailed survey of his mathematical achievements and a complete list of publications as well as the translations of two of Vinogradov s surveys whose Russian originals are now hardly accessible Banach Algebras and the General Theory of *-Algebras: Volume 2, *-Algebras Theodore W. Palmer, 1994 This is the second volume of a two volume set that provides a modern account of basic Banach algebra theory including all known results on general Banach algebras The author emphasizes the roles of algebra structure and explores the algebraic results which underlie the theory of Banach algebras and algebras Proofs are presented in complete detail at a level accessible to graduate students The books will become the standard reference for the general theory of algebras This second volume deals with algebras Chapter 9 develops the theory of algebras without additional restrictions Chapter 10 proves nearly all the results previously known for Banach algebras and hermitian Banach algebras for algebras with various essentially algebraic restrictions Chapter 11 restates the previous results in terms of Banach algebras and uses them to prove results explicitly involving the complete norm Chapter 12 is devoted to locally compact groups and the algebras related to them **Third Siberian School: Algebra and Analysis** Leonid Arkad'evich Bokut', Michiel
