**Multivariable Calculus from Graphical, Numerical, and Symbolic Points of View** Arnold Ostebee, Paul Zorn, 1997 The text addresses a general mathematical audience mathematics majors, science and engineering majors and non-science majors. The authors assume little more mathematical maturity than for single variable calculus but the presentation is not rigorous in the sense of mathematical analysis. They want students to encounter, understand and use the main concepts and methods of multivariable calculus and to see how they extend the simpler objects and ideas of elementary calculus. They assume that students have the usual one year single variable calculus preparation but little or nothing more than that. About this preliminary ed    Catalog of Copyright Entries.
