## Minimal Surfaces:

*A Survey of Minimal Surfaces* Robert Osserman, 2013-12-10 Newly updated accessible study covers parametric and non parametric surfaces isothermal parameters Bernstein's theorem much more including such recent developments as new work on Plateau's problem and on isoperimetric inequalities Clear comprehensive examination provides profound insights into crucial area of pure mathematics 1986 edition Index

*A Course in Minimal Surfaces* Tobias H. Colding, William P.

Minicozzi, 2011 Minimal surfaces date back to Euler and Lagrange and the beginning of the calculus of variations Many of the techniques developed have played key roles in geometry and partial differential equations Examples include monotonicity and tangent cone analysis originating in the regularity theory for minimal surfaces estimates for nonlinear equations based on the maximum principle arising in Bernstein's classical work and even Lebesgue's definition of the integral that he developed in his thesis on the Plateau problem for minimal surfaces This book starts with the classical theory of minimal surfaces and ends up with current research topics Of the various ways of approaching minimal surfaces from complex analysis PDE or geometric measure theory the authors have chosen to focus on the PDE aspects of the theory The book also contains some of the applications of minimal surfaces to other fields including low dimensional topology general relativity and materials science The only prerequisites needed for this book are a basic knowledge of Riemannian geometry and some familiarity with the maximum principle

**Minimal Surfaces** Ulrich Dierkes, Stefan Hildebrandt, Friedrich

Sauvigny, 2010-08-16 Minimal Surfaces is the first volume of a three volume treatise on minimal surfaces Grundlehren Nr 339 341 Each volume can be read and studied independently of the others The central theme is boundary value problems for minimal surfaces The treatise is a substantially revised and extended version of the monograph Minimal Surfaces I II Grundlehren Nr 295 this is done in the context of stable  $H$  surfaces i.e. of stable surfaces of prescribed mean curvature  $H$  especially of cmc surfaces  $H = \text{const}$  and leads to curvature estimates for stable immersed cmc surfaces and to Nitsche's uniqueness theorem and Tomi's finiteness result In addition a theory of unstable solutions of Plateau's problems is developed which is based on Courant's mountain pass lemma Furthermore Dirichlet's problem for nonparametric  $H$  surfaces is solved using the solution of Plateau's problem for  $H$  surfaces and the pertinent estimates

Colding, William P. Minicozzi, 1999

[A Survey on Classical Minimal Surface Theory](#) William Meeks, Joaquín Pérez, 2012

Meeks and Pérez present a survey of recent spectacular successes in classical minimal surface theory The classification of minimal planar domains in three dimensional Euclidean space provides the focus of the account The proof of the classification depends on the work of many currently active leading mathematicians thus making contact with much of the most important results in the field Through the telling of the story of the classification of minimal planar domains the general mathematician may catch a glimpse of the intrinsic beauty of this theory and the authors perspective of what is happening at this historical moment in a very classical subject This book includes an updated tour through some of the recent advances in

the theory such as Colding Minicozzi theory minimal laminations the ordering theorem for the space of ends conformal structure of minimal surfaces minimal annular ends with infinite total curvature the embedded Calabi Yau problem local pictures on the scale of curvature and topology the local removable singularity theorem embedded minimal surfaces of finite genus topological classification of minimal surfaces uniqueness of Scherk singly periodic minimal surfaces and outstanding problems and conjectures

### **Minimal Surfaces and Functions of Bounded Variation**

Giusti,1984-01-01 The problem of finding minimal surfaces i e of finding the surface of least area among those bounded by a given curve was one of the first considered after the foundation of the calculus of variations and is one which received a satis factory solution only in recent years Called the problem of Plateau after the blind physicist who did beautiful experiments with soap films and bubbles it has resisted the efforts of many mathematicians for more than a century It was only in the thirties that a solution was given to the problem of Plateau in 3 dimensional Euclidean space with the papers of Douglas DJ and Rado R T1 2 The methods of Douglas and Rado were developed and extended in 3 dimensions by several authors but none of the results was shown to hold even for minimal hypersurfaces in higher dimension let alone surfaces of higher dimension and codimension It was not until thirty years later that the problem of Plateau was successfully attacked in its full generality by several authors using measure theoretic methods in particular see De Giorgi DG1 2 4 5 Reifenberg RE Federer and Fleming FF and Almgren AF1 2 Federer and Fleming defined a  $k$  dimensional surface in  $\mathbb{R}^n$  as a  $k$  current i e a continuous linear functional on  $k$  forms Their method is treated in full detail in the splendid book of Federer FH 1

### Geometry V Robert Osserman,1997-10-09

Few people outside of mathematics are aware of the varieties of mathemat ical experience the degree to which different mathematical subjects have different and distinctive flavors often attractive to some mathematicians and repellant to others The particular flavor of the subject of minimal surfaces seems to lie in a combination of the concreteness of the objects being studied their origin and relation to the physical world and the way they lie at the intersection of so many different parts of mathematics In the past fifteen years a new component has been added the availability of computer graphics to provide illustrations that are both mathematically instructive and esthetically pleas ing During the course of the twentieth century two major thrusts have played a seminal role in the evolution of minimal surface theory The first is the work on the Plateau Problem whose initial phase culminated in the solution for which Jesse Douglas was awarded one of the first two Fields Medals in 1936 The other Fields Medal that year went to Lars V Ahlfors for his contributions to complex analysis including his important new insights in Nevanlinna Theory The second was the innovative approach to partial differential equations by Serge Bernstein which led to the celebrated Bernstein s Theorem stating that the only solution to the minimal surface equation over the whole plane is the trivial solution a linear function

### *Minimal Surfaces I* Ulrich Dierkes,Stefan

Hildebrandt,Albrecht Küster,Ortwin Wohlrab,2013-11-27 Minimal surfaces I is an introduction to the field of minimal surfaces and apresentation of the classical theory as well as of parts of the modern development centered around boundary

value problems Part II deals with the boundary behaviour of minimal surfaces Part I is particularly apt for students who want to enter this interesting area of analysis and differential geometry which during the last 25 years of mathematical research has been very active and productive Surveys of various subareas will lead the student to the current frontiers of knowledge and can also be useful to the researcher The lecturer can easily base courses of one or two semesters on differential geometry on Vol 1 as many topics are worked out in great detail Numerous computer generated illustrations of old and new minimal surfaces are included to support intuition and imagination Part 2 leads the reader up to the regularity theory for nonlinear elliptic boundary value problems illustrated by a particular and fascinating topic There is no comparably comprehensive treatment of the problem of boundary regularity of minimal surfaces available in book form This long awaited book is a timely and welcome addition to the mathematical literature

**Minimal Surfaces II** Ulrich Dierkes, Stefan Hildebrandt, Albrecht Küster, Ortwin Wohlrab, 2013-03-14 Minimal Surfaces I is an introduction to the field of minimal surfaces and a presentation of the classical theory as well as of parts of the modern development centered around boundary value problems Part II deals with the boundary behaviour of minimal surfaces Part I is particularly apt for students who want to enter this interesting area of analysis and differential geometry which during the last 25 years of mathematical research has been very active and productive Surveys of various subareas will lead the student

This long awaited book is a timely and welcome addition to the mathematical literature **Complete Minimal Surfaces of**

**Finite Total Curvature** Kichoon Yang,2013-03-09 This monograph contains an exposition of the theory of minimal surfaces in Euclidean space with an emphasis on complete minimal surfaces of finite total curvature Our exposition is based upon the philosophy that the study of finite total curvature complete minimal surfaces in  $R^3$  in large measure coincides with the study of meromorphic functions and linear series on compact Riemann surfaces This philosophy is first indicated in the fundamental theorem of Chern and Osserman A complete minimal surface  $M$  immersed in  $R^3$  is of finite total curvature if and only if  $M$  with its induced conformal structure is conformally equivalent to a compact Riemann surface  $M_g$  punctured at a finite set  $E$  of points and the tangential Gauss map extends to a holomorphic map  $M_g \rightarrow P^2$  Thus a finite total curvature complete minimal surface in  $R^3$  gives rise to a plane algebraic curve Let  $M_g$  denote a fixed but otherwise arbitrary compact Riemann surface of genus  $g$  A positive integer  $r$  is called a puncture number for  $M_g$  if  $M_g$  can be conformally immersed into  $R^3$  as a complete finite total curvature minimal surface with exactly  $r$  punctures the set of all puncture numbers for  $M_g$  is denoted by  $P(M_g)$  For example Jorge and Meeks JM showed by constructing an example  $g$  for each  $r$  that every positive integer  $r$  is a puncture number for the Riemann surface  $pl_g$

*Minimal Surfaces of Codimension One* U. Massari,M.

Miranda,2000-04-01 This book gives a unified presentation of different mathematical tools used to solve classical problems like Plateau's problem Bernstein's problem Dirichlet's problem for the Minimal Surface Equation and the Capillary problem The fundamental idea is a quite elementary geometrical definition of codimension one surfaces The isoperimetric property of the Euclidean balls together with the modern theory of partial differential equations are used to solve the 19th Hilbert problem Also included is a modern mathematical treatment of capillary problems

*Minimal Surfaces in  $R^3$*  J. Lucas M.

Barbosa,A.Gervasio Colares,2006-11-14 *Minimal Surfaces, Stratified Multivarifolds, and the Plateau Problem* A. T.

Fomenko,1991-02-21 Plateau's problem is a scientific trend in modern mathematics that unites several different problems connected with the study of minimal surfaces In its simplest version Plateau's problem is concerned with finding a surface of least area that spans a given fixed one dimensional contour in three dimensional space perhaps the best known example of such surfaces is provided by soap films From the mathematical point of view such films are described as solutions of a second order partial differential equation so their behavior is quite complicated and has still not been thoroughly studied Soap films or more generally interfaces between physical media in equilibrium arise in many applied problems in chemistry physics and

also in nature In applications one finds not only two dimensional but also multidimensional minimal surfaces that span fixed closed contours in some multidimensional Riemannian space An exact mathematical statement of the problem of finding a surface of least area or volume requires the formulation of definitions of such fundamental concepts as a surface its boundary minimality of a surface and so on It turns out that there are several natural definitions of these concepts which permit the study of minimal surfaces by different and complementary methods In the framework of this comparatively small book it would be almost impossible to cover all aspects of the modern problem of Plateau to which a vast literature has been devoted However this book makes a unique contribution to this literature for the authors guiding principle was to present the material with a maximum of clarity and a minimum of formalization Chapter 1 contains historical background on Plateau's problem referring to the period preceding the 1930s and a description of its connections with the natural sciences This part is intended for a very wide circle of readers and is accessible for example to first year graduate students The next part of the book comprising Chapters 2 5 gives a fairly complete survey of various modern trends in Plateau's problem This section is accessible to second and third year students specializing in physics and mathematics The remaining chapters present a detailed exposition of one of these trends the homotopic version of Plateau's problem in terms of stratified multivarifolds and the Plateau problem in homogeneous symplectic spaces This last part is intended for specialists interested in the modern theory of minimal surfaces and can be used for special courses a command of the concepts of functional analysis is assumed

**Global Analysis of Minimal Surfaces** Ulrich Dierkes, Stefan Hildebrandt, Anthony Tromba, 2010-08-16 Many properties of minimal surfaces are of a global nature and this is already true for the results treated in the first two volumes of the treatise Part I of the present book can be viewed as an extension of these results For instance the first two chapters deal with existence regularity and uniqueness theorems for minimal surfaces with partially free boundaries Here one of the main features is the possibility of edge crawling along free parts of the boundary The third chapter deals with a priori estimates for minimal surfaces in higher dimensions and for minimizers of singular integrals related to the area functional In particular far

reaching Bernstein theorems are derived The second part of the book contains what one might justly call a global theory of minimal surfaces as envisioned by Smale First the Douglas problem is treated anew by using Teichmller theory Secondly various index theorems for minimal theorems are derived and their consequences for the space of solutions to Plateau's problem are discussed Finally a topological approach to minimal surfaces via Fredholm vector fields in the spirit of Smale is presented
