Elementary Science Methods Lauren Madden, 2022. As teachers and parents we often hear that children are the best scientists. Great science teachers tune in to children's interests and observations to create engaging and effective lessons. This focus on the innate curiosity of children or humans overall is celebrated and used to justify and support efforts around STEM teaching and learning. Yet when we discuss elementary school teachers we often hear many inside and outside the classroom report that these teachers dislike fear and feel uncomfortable with science. This is exactly the opposite approach from what is universally recommended by science education scholars. This practical textbook meets the immediate contextual needs of future and current elementary teachers by using an assets based approach to science teaching showing how to create inquiry based lessons, differentiate instruction and lesson design based on children's developmental ages and needs and providing easy to use tools to advocate for scientific teaching and learning guided by the Next Generation Science Standards. NGSS ded by the Next Generation Science Standards NGSS.

A Guide to Teaching Elementary Science Yvette F. Greenspan, 2015-12-21. Nationally and internationally educators now understand the critical importance of STEM subjects: science, technology, engineering and mathematics. Today the job of the classroom science teacher demands finding effective ways to meet current curricula standards and prepare students for a future in which a working knowledge of science and technology will dominate. But standards and goals don't mean a thing unless we grab students' attention, capture and deepen children's natural curiosity, create an exciting learning environment that engages the learner and make science come alive inside and outside the classroom. Setting A Guide to Teaching Elementary Science: Ten Easy Steps gives teachers at all stages of classroom experience exactly what the title implies. Written by lifelong educator Yvette Greenspan, this book is designed for busy classroom teachers who face tough conditions from overcrowded classrooms to shrinking budgets and too often end up anxious and overwhelmed by the challenges ahead and their desire for an excellent science program. This book helps teachers develop curricula compatible with the Next Generation Science Standards and the Common Core Standards, provides easy to implement steps for setting up a science classroom, plus strategies for using all available resources to assemble needed teaching materials, offers detailed sample lesson plans in each STEM subject adaptable to age and ability and designed to embrace the needs of all learners and presents bonus information about organizing field trips and managing science fairs. Without question, effective science curricula can help students develop critical thinking skills and a lifelong

passion for science Yvette Greenspan received her doctorate degree in science education and has developed science curriculum at all levels A career spent in teaching elementary students in an urban community she now instructs college students sharing her love for the teaching and learning of science She considers it essential to encourage today's students to be active learners and to concentrate on STEM topics that will help prepare them for the real world

The Future of Science in Elementary Schools Senta A. Raizen, Arie M. Michelsohn, 1994-02-09 Scientific literacy depends upon children's early engagement in science It is in the elementary school years that teachers have an opportunity to cultivate and nourish their students' innate curiosity about the world Well taught science classes help give students the skills to investigate problems logically and systematically and make informed decisions based on evidence skills that can serve young people the rest of their lives Unfortunately many teachers are ill prepared to teach these classes Drawing on the knowledge and experience of a panel of leaders in elementary education and in science education and the results of a survey of 142 teacher education programs editors Senta A. Raizen and Arie M. Michelsohn offer a new vision for preparing prospective teachers of grades K through six in science content and pedagogy a vision that will transform teachers from people who merely pass on someone else's knowledge to creative facilitators of children's learning through involvement in the process of science investigation The authors include a three part interchangeable model for preparing teachers in science and they outline the basics of what prospective elementary school teachers need to learn in science courses and in science pedagogy courses including fundamental underlying concepts habits of mind and effective instructional strategies The recommended courses and programs will arm teachers with powerful tools necessary for a true understanding of science learning in children
