book provides an extensive overview of the diffusion of Information and Communication Technologies ICTs in developing countries between 2000 and 2012 It covers issues such as country specific ICT diffusion patterns technological substitution and technological convergence By identifying social economic and institutional prerequisites and analyzing critical country specific conditions the author develops a new approach to explaining the emergence of their technological takeoff Readers will discover how developing countries are now adopting ICTs rapidly catching up with the developed world in terms of ICT access and use **The Digital Challenge** Shirin Madon,S Krishna,2018-02-06 This title was first published in 2003

Information and communication technologies ICTs are increasingly being recognized as vital to the economic growth and global inclusion and participation of developing countries This book brings together both academics and practitioners to provide a comprehensive and insightful overview of ICT and development around the world It examines the role of IT in providing new economic and industrial opportunities in increasing access to global information and communication in assisting small cultural and ethnic groups to overcome disadvantages of physical distance and in catalysing initiatives towards democratic decentralization and empowerment of citizens It also critically appraises major problems such as inappropriate focus and resource allocation and of missed opportunities By combining comparative case studies from Africa

South and East Asia South America and Eastern Europe with theoretical analysis this volume synthesizes a range of issues related to the evident tensions that exist for developing countries as they try to balance global and local priorities through the adoption and use of ICTs *Communication Technology and Developing Countries* Rami Adel Aboushadi, 2010-12

Information and communication technologies ICT have been growing rapidly in developed countries over the last five decades ICT has been revolutionizing the way in which people in these countries live and conduct their work ICT has changed the administration governance education business competitiveness and global operations in them A large number of developing countries particularly low income countries have failed in the adaptation of these technologies thus contributing to the digital divide between the developed and developing countries This is predominantly so in the rural villages in that modern technology has not reached to the institutions in rural villages In other words the majority of people living in rural areas have neither access nor the means to obtain modern ICT because of their low economic position Imagine a situation in which all interaction with the government in developing countries can be done through one counter 24 hours a day 7 days a week without waiting in lines at government offices *Information Technology, Development, and Social Change* Fay Patel, Prahalad Sooknandan, Giselle Rampersad, Anuradha Mundkur, 2012-05-31 The speed and cost effectiveness of new information technology has prompted many to view these innovations as a panacea for social and economic development However such a view flies in the face of continuing inequities in education health food and infrastructure This volume explores these issues along with questions of access privilege literacy training and the environmental and health effects of information technologies in the developing world arguing that a higher level of development does not always result from a higher level of technologization *Information and Communication Technologies and Broad-based Development* Jeremy Grace, Charles Kenny, Christine Zhen-Wei Qiang, World Bank, 2004

Annotation This paper reviews some of the evidence linking telecommunications and the Internet and economic growth the likely impact of these new ICTs on income inequality and anecdotal evidence on the role of the Internet in improving government services and governance Its final chapter looks at methods to maximize the development impact of new ICTs Information and Communication Technologies in the Context of Globalization K. Lal, 2007-11-13 This book focuses on the adoption of new technologies led by information and communication technologies by SMEs in developing countries It identifies several factors that augment competitiveness of firms in the era of globalization Contrary to the general belief these factors are not uniform across developing world Based on the empirical evidence from firms located in Malaysia India Nigeria Jamaica and Costa Rica the study concludes that firms cannot remain competitive without institutional support Since firms operate in different institutional and economic environment form of support varies from one country to another

**ICT4D: Information and Communication Technology for Development** P. T. H. Unwin, 2009-02-09 communities Book Jacket *Handbook on ICT in Developing Countries: 5G Perspective* Knud Erik Skouby, Idongesit William, Albert Gyamfi, 2017-05-16 The mobile communications market

in developing countries is growing at a rapid rate This is evident in the rapid spread of mobile broadband cellular networks such as 3G 4G is also being deployed in developing countries around the world As the global communications market proceeds towards 5G it is evident that developing countries will not be left behind However there are challenges and barriers on the road ahead specific to developing countries To aid policy makers researchers and members of the academia make informed decision that will help the advancement of 5G this handbook provides an insight into the impact of existing mobile cellular networks in some developing countries Topics discussed in this handbook include Digital divide Policy outlook 5G and rural areas 5G readiness Telco Business models Telecom tower pricing Mobile application adoption

**The New Economy in Development** A. D'Costa, 2006-09-05 The New Economy in Development presents conceptual and empirical analyses of the opportunities offered by information and communications technologies ICT Contributors include scholars and policy makers from international organizations and the chapters include understudied cases from Africa Latin America Eastern Europe and Asia

**Reclaiming Information and Communication Technologies for Development** Tim Unwin, 2017-05-18 The development of new Information and Communication Technologies ICTs has transformed the world over the last two decades These technologies are often seen as being inherently good with the ability to make the world better and in particular to reduce poverty However their darker side is frequently ignored in such accounts ICTs undoubtedly have the potential to reduce poverty for example by enhancing education health delivery rural development and entrepreneurship across Africa Asia and Latin America However all too often projects designed to do so fail to go to scale and are unsustainable when donor funding ceases Indeed ICTs have actually dramatically increased inequality across the world The central purpose of this book is to account for why this is so and it does so primarily by laying bare the interests that have underlain the dramatic expansion of ICTs in recent years Unless these are fully understood it will not be possible to reclaim the use of these technologies to empower the world's poorest and most marginalised

**Use of New Communication Technologies in Third World Countries : a Comparison of Perspectives** Lai Si Tsui, 1990 *New Generic Technologies in Developing Countries* M.R. Bhagavan, 2016-07-27 An examination of developing countries ability to benefit from new generic technologies in the realms of information communication biotechnology and new materials The book demonstrates why some developing countries have made considerable progress in absorbing the new technologies while most are still at the starting blocks and draws on the international donor community's experience to analyse appropriate aid policies and strategies

**Information and communication technologies for development and poverty reduction** Maximo Torero, Joachim von Braun, 2006-01-01 The IT revolution made some glorious promises to the world's poor instant access to information and far flung markets political empowerment greater growth even the possibility that countries could leapfrog entire stages of development But when none of that happened in a hurry the hoopla gave way to concern that rather than closing the wealth gap IT was exacerbating it Yet for all the international debate and millions of words written about the digital divide very little

systematic empirical research or studies over time have been done to confirm claims and counterclaims and to guide policymakers on how this technology actually affects the development of low income countries In this volume Maximo Torero and Joachim von Braun seek to address this omission with a collection of case studies exploring the relationship between information and communication technologies ICTs and development in Bangladesh China India Ghana Laos Peru and East Africa Their conclusion is that yes ICTs do have potential to serve and empower the poor by linking them to commercial and social networks cutting transaction costs and making the delivery of public goods like education and healthcare more efficient But these benefits can accrue only when the supporting infrastructure is in place and when ICT policies take into account not only questions of connectivity but also of capability how to help poor people use the new tools and of content what is relevant and in what form All three c s are critical Without coherent strategies and the right regulatory policies there is the very real likelihood that scarce resources will be misallocated and that ICT induced growth will remain elusive
