**The New Competitive Advantage** Michael H. Best, 2001      **Strategic Innovation** Allan Afuah, 2009-04-01 In today's fast changing business environment those firms that want to remain competitive must also be innovative. Innovation is not simply about developing new technologies into new products or services but in many cases finding new models for doing business in the face of change. It often entails changing the rules of the game. Strategic Innovation demonstrates to students how to create and appropriate value using new game strategies to gain competitive advantage. The book begins with a summary of the major strategic frameworks and showing the origins of strategic innovation. Next Afuah gives a thorough examination of contemporary strategy from an innovation standpoint including how to develop strategy in the face of change, a detailed framework for assessing the profitability potential of a strategy or product, consideration of how both for-profit and non-profit organizations can benefit from new game strategies. With a wealth of quantitative examples of successful strategies as well as descriptive cases, Strategic Innovation will complement courses in strategy and technology and innovation.

The New Competitive Advantage Michael Best, 2001-07-12 This book addresses the sustained resurgence of the American economy and the firms, regions, and technologies that are driving this growth. Michael Best develops a new model of technology management and regional innovation based on the principle of systems integration. The principle of systems integration is manifest in the organizational capability of firms individually and networked to foster rapid technological change. Application of the principle of systems integration to business organization means integrating an ongoing technology management capability into a production system. The effect is a network or cluster of entrepreneurial firms in which design is decentralized within the enterprise and diffused amongst networked enterprises. It is a business model ideally suited to product-led strategies and technological innovation. The combination of entrepreneurial firms and inter-firm networks is shown to foster a range of dynamic cluster processes which in turn underlie the growth of Silicon Valley and the unexpected resurgence of Boston's Route 128. The general character of the capabilities and innovation perspective is illustrated with applications to regions at different levels of industrial development. The implications for policy making are profound. Technology management is a powerful lever for both fostering growth and shaping competitive advantage. Moreover, it offers a framework for addressing the challenge of ecologically sustainable growth. Complex product systems such as energy, transportation, and health are a consequence of past and present technology R & D choices and corresponding investments in technical education. Thus capability and skill development policies shape what is on offer in the marketplace.
