Language, Mind and Brain Ewa Dabrowska, 2019-06-01 Human languages reside in human brains and it is undeniable that properties of the mind brain place strong constraints on linguistic structure Yet most linguists know little about the psychology of language and even less about its neural substrate Language Mind and Brain explores these constraints and shows how linguistics could benefit by incorporating insights from research on language acquisition language processing neurolinguistics and other disciplines concerned with human linguistic abilities The first part of the book offers a useful introduction to the relevant issues for readers with little prior knowledge of these disciplines In the second part the cognitive underpinnings of language are discussed in more detail in three case studies chosen to illuminate complementary aspects of linguistic structure the semantics of locative terms morphological rules the syntax of English questions The final chapter is devoted to approaches to language which meet the requirements outlined earlier with particular prominence given to cognitive and construction grammar Features A unique contribution to the debate on the relationship between language and other cognitive processes Accessible text which introduces readers to a psychologically realistic theory of language Includes a definitive introduction and case studies to illustrate key topics

**Is the Language Faculty Non Linguistic?** Umberto Ansaldi, N. J. Enfield, 2016-08-15 A line of research in cognitive science over several decades has been dedicated to finding an innate language specific cognitive system a faculty which allows human infants to acquire languages natively without formal instruction and within short periods of time In recent years this search has attracted significant controversy in cognitive science generally and in the language sciences specifically Some maintain that the search has had meaningful results though there are different views as to what the findings are ranging from the view that there is a rich and rather specific set of principles to the idea that the contents of the language faculty are while specifiable in fact extremely minimal But other researchers rigorously oppose the continuation of this search arguing that decades of effort have turned up nothing The fact remains that the proposal of a language specific faculty was made for a good reason namely as an attempt to solve the vexing puzzle of language in our species Much work has been developing to address this and specifically

to look for ways to characterize the language faculty as an emergent phenomenon i.e. not as a dedicated language specific system but as the emergent outcome of a set of uniquely human but not specifically linguistic factors in combination. A number of theoretical and empirical approaches are being developed in order to account for the great puzzles of language: language processing, language usage, language acquisition, the nature of grammar and language change and diversification. This research topic aims at reviewing and exploring these recent developments and establishing bridges between these young frameworks as well as with the traditions that have come before. The goal of this Research Topic is to focus on current developments in what many regard as a paradigm shift in the language sciences. In this Research Topic we want to ask: If current explicit proposals for an innate dedicated faculty for language are not supported by data or arguments, how can we solve the problems that UG was proposed to solve? Is it possible to solve the puzzles of language in our species with an appeal to causes that are not specifically linguistic?

*Signs, Mind, and Reality* Sebastian Shaumyan, 2006-01-01. The book presents a new science of semiotic linguistics. The goal of semiotic linguistics is to discover what characterizes language as an intermediary between the mind and reality so that language creates the picture of reality we perceive. The cornerstone of semiotic linguistics is the discovery and resolution of language antinomies (contradictions between two apparently reasonable principles or laws). Language antinomies constitute the essence of language and hence must be studied from both linguistic and philosophical points of view. The basic language antinomy which underlies all other antinomies is the antinomy between meaning and information. Both generative and classical linguistic theories are unaware of the need to distinguish between meaning and information. By confounding these notions they are unable to discover language antinomies and confine their research to a naturalistic description of superficial language phenomena rather than the quest for the essence of language.

Publisher Description. *Operators in the Lexicon* Dany Jaspers, 2005. **Linguistic Structures** Harry van der Hulst, 2008. *The Philosopher's Index*, 2008. Vols for 1969 include a section of abstracts. [In Search of a Language for the Mind-brain](#) Anjum P. Saleemi, Ocke-Schwen Bohn, Albert Gjedde, 2003. What is human nature? How is language related to thought and should the connection be investigated socially or scientifically? Is external reality coherent or fragmented? What are the foundations of rationality and how trustworthy are they? Such questions have bedevilled thinkers for millennia. Contemporary scholars have harnessed enormous resources to find answers yet their inquiry is invariably constrained by the tunnel vision of academic specialisation. This issue of *The Dolphin* seeks to establish common ground among the disciplines examining the mind-brain continuum. Among those meeting the editors' challenge to think outside the disciplinary box are Noam Chomsky, John Searle and Steven Pinker as well as a dozen others from the fields of neuroscience, linguistics, philosophy, cognitive science, English, computer science and ethnography. The implicit framework that results should help researchers in all fields locate the diversity of human knowing within a joint
