Subject Guide to Books in Print, 2001 **Subject Guide to Children's Books in Print 1997** Bowker Editorial Staff, R R Bowker Publishing, 1996-09 **Parallel Algorithms for Matrix Computations** K. Gallivan, M. Heath, E. Ng, B. Peyton, R. Plemmons, C. Romine, A. Sameh, R. Voigt, 1990-01-01 Mathematics of Computing Parallelism **Parallelism in Matrix Computations** Efstratios Gallopoulos, Bernard Philippe, Ahmed H. Sameh, 2015-07-25 This book is primarily intended as a research monograph that could also be used in graduate courses for the design of parallel algorithms in matrix computations. It assumes general but not extensive knowledge of numerical linear algebra, parallel architectures and parallel programming paradigms. The book consists of four parts: I Basics, II Dense and Special Matrix Computations, III Sparse Matrix Computations, and IV Matrix functions and characteristics. Part I deals with parallel programming paradigms and fundamental kernels including reordering schemes for sparse matrices. Part II is devoted to dense matrix computations such as parallel algorithms for solving linear systems, linear least squares, the symmetric algebraic eigenvalue problem, and the singular value decomposition. It also deals with the development of parallel algorithms for special linear systems such as banded Vandermonde, Toeplitz, and block Toeplitz systems. Part III addresses sparse matrix computations: a) the development of parallel iterative linear system solvers with emphasis on scalable preconditioners, b) parallel schemes for obtaining a few of the extreme eigenpairs or those contained in a given interval in the spectrum of a standard or generalized symmetric eigenvalue problem, and c) parallel methods for computing a few of the extreme singular triplets. Part IV focuses on the development of parallel algorithms for matrix functions and special characteristics such as the matrix pseudospectrum and the determinant. The book also reviews the theoretical and practical background necessary when designing these algorithms and includes an extensive bibliography that will be useful to researchers and students alike. The book brings together many existing algorithms for the fundamental matrix computations that have a proven track record of efficient implementation in terms of data locality and data transfer on state-of-the-art systems, as well as several algorithms that are presented for the first time, focusing on the opportunities for parallelism and algorithm robustness. **Backpacker**, 2007-09 Backpacker brings the outdoors straight to the reader's doorstep, inspiring and enabling them to go more places and enjoy nature more often. The authority on active adventure, Backpacker is the world's first GPS-enabled magazine and the only magazine whose editors personally test the hiking trails, camping gear, and survival tips they publish. Backpacker's Editors' Choice Awards, an industry honor recognizing design, feature, and product innovation, has become the gold standard against which all other outdoor industry awards are measured. **Parallel Algorithms and Matrix Computation** Jagdish J. Modi, 1988 An introduction to parallel computation and the application of parallel algorithms to numerical linear algebra based on a lecture course at the University of Cambridge. The emphasis is on the design and analysis of algorithms which are of importance to industrial and academic research. **Parallel Algorithms** Henri Casanova, Arnaud Legrand, Yves Robert, 2008-07-17

Focusing on algorithms for distributed memory parallel architectures *Parallel Algorithms* presents a rigorous yet accessible treatment of theoretical models of parallel computation parallel algorithm design for homogeneous and heterogeneous platforms complexity and performance analysis and essential notions of scheduling The book extract *The Design and Analysis of Parallel Algorithms* Selim G. Akl,1989 Mathematics of Computing Parallelism *Parallel Processing and Parallel Algorithms* Seyed H Roosta,2012-12-06 Motivation It is now possible to build powerful single processor and multiprocessor systems and use them efficiently for data processing which has seen an explosive expansion in many areas of computer science and engineering One approach to meeting the performance requirements of the applications has been to utilize the most powerful single processor system that is available When such a system does not provide the performance requirements pipelined and parallel processing structures can be employed The concept of parallel processing is a departure from sequential processing In sequential computation one processor is involved and performs one operation at a time On the other hand in parallel computation several processors cooperate to solve a problem which reduces computing time because several operations can be carried out simultaneously Using several processors that work together on a given computation illustrates a new paradigm in computer problem solving which is completely different from sequential processing From the practical point of view this provides sufficient justification to investigate the concept of parallel processing and related issues such as parallel algorithms Parallel processing involves utilizing several factors such as parallel architectures parallel algorithms parallel programming languages and performance analysis which are strongly interrelated In general four steps are involved in performing a computational problem in parallel The first step is to understand the nature of computations in the specific application domain *Parallel Matrix Computations* G. W. Stewart,Dianne P. O'Leary,MARYLAND UNIV COLLEGE PARK DEPT OF COMPUTER SCIENCE.,MARYLAND UNIV COLLEGE PARK.,1985 This project concerns the design and analysis of algorithms to be run in a processor rich environment It focuses primarily on algorithms that require no global control and that can be run on systems with only local connections among processors The properties of these algorithms both theoretically and experimentally are investigated The experimental work is done on the ZMOB a working parallel computer operated by the Laboratory for Parallel Computation of the Computer Science Department at the University of Maryland The emphasis is on two areas 1 Dense problems from numerical linear algebra and 2 The iterative and direct solution of sparse linear systems Additional keywords parallel algorithms and software development **Analysis and Design of Parallel Algorithms** S. Lakshmivarahan,Sudarshan Kumar Dhall,1990 **Parallel Algorithms for Numerical Linear Algebra** H. van der Vorst,P. van Dooren,2014-06-28 This is the first in a new series of books presenting research results and developments concerning the theory and applications of parallel computers including vector pipeline array fifth future generation computers and neural computers All aspects of high speed computing fall within the scope of the series e.g algorithm design applications software engineering networking taxonomy models and architectural trends performance
