Topics in Parallel and Distributed Computing Sushil K Prasad,Anshul Gupta,Arnold L Rosenberg,Alan Sussman,Charles C Weems,2015-09-16 Topics in Parallel and Distributed Computing provides resources and guidance for those learning PDC as well as those teaching students new to the discipline The pervasiveness of computing devices containing multicore CPUs and GPUs including home and office PCs laptops and mobile devices is making even common users dependent on parallel processing Certainly it is no longer sufficient for even basic programmers to acquire only the traditional sequential programming skills The preceding trends point to the need for imparting a broad based skill set in PDC technology However the rapid changes in computing hardware platforms and devices languages supporting programming environments and research advances poses a challenge both for newcomers and seasoned computer scientists This edited collection has been developed over the past several years in conjunction with the IEEE technical committee on parallel processing TCPP which held several workshops and discussions on learning parallel computing and integrating parallel concepts into courses throughout computer science curricula Contributed and developed by the leading minds in parallel computing research and instruction Provides resources and guidance for those learning PDC as well as those teaching students new to the discipline Succinctly addresses a range of parallel and distributed computing topics Pedagogically designed to ensure understanding by experienced engineers and newcomers Developed over the past several years in conjunction with the IEEE technical committee on parallel processing TCPP which held several workshops and discussions on learning parallel computing and integrating parallel concepts

Distributed and Parallel Computing Michael Hobbs,Andrzej Goscinski,Wanlei Zhou,2005-10-13 There are many applications that require parallel and distributed processing to allow complicated engineering business and research problems to be solved in a reasonable time Parallel and distributed processing is able to improve company profit lower costs of design production and deployment of new technologies and create better business environments The major lesson learned by car and aircraft engineers drug manufacturers genome researchers and other specialist is that a computer system is a very powerful tool that is able to help them solving even more complicated problems That has led computing specialists to new computer system architecture and exploiting parallel computers clusters of clusters and distributed systems in the form of grids There are also institutions that do not have so complicated problems but would like to improve profit lower costs of design and production by using parallel and distributed processing on clusters In general to achieve these goals parallel and distributed processing must become the computing mainstream This implies a need for new architectures of parallel and distributed systems new system management facilities and new application algorithms This also implies a need for better understanding of grids and clusters and in particular their operating systems scheduling algorithms load balancing heterogeneity transparency application deployment which is of the most critical importance for their development and taking them by industry and business

Welcome to the proceedings of the 2nd International Symposium on Parallel and Distributed Processing and Applications ISPA2004 which was held in Hong Kong, China, 13-15 December 2004. With the advance of computer networks and hardware technology, parallel and distributed processing has become a key technology which plays an important part in determining future research and development activities in many academic and industrial branches. It provides a means to solve computationally intensive problems by improving processing speed. It is also the only

able approach to building highly reliable and inherently distributed applications. ISPA2004 provided a forum for scientists and engineers in academia and industry to exchange and discuss their experiences, new ideas, research results and applications about all aspects of parallel and distributed computing. There was a very large number of paper submissions, 361 from 26 countries and regions, including not only Asia and the Pacific but also Europe and North America. All submissions were reviewed by at least three program or technical committee members or external reviewers. It was extremely difficult to select the presentations for the conference because there were so many excellent and interesting submissions. In order to allocate as many papers as possible and keep the high quality of the conference, we finally decided to accept 78 regular papers and 38 short papers for oral technical presentations. We believe that all of these papers and topics not only provide novel ideas, new results, work in progress and state of the art techniques in this field but also stimulate the future research activities in the area of parallel and distributed computing with applications.

Parallel and Distributed Processing , Abstract Machine Models for Parallel and Distributed Computing M. Kara,J. R. Davy,D. Goodeve,1996 Abstract Machine Models have played a profound though frequently unacknowledged role in the development of modern computing systems They provide a precise definition of vital concepts allow system complexity to be managed by providing appropriate views of the activity under consideration enable reasoning about the correctness and quantitative performance of proposed problem solutions and encourage communication through a common medium of expression Abstract Models in Parallel and Distributed computing have a particularly important role in the development of contemporary systems encapsulating and controlling an inherently high degree of complexity The Parallel and Distributed computing communities have traditionally considered themselves to be separate However there is a significant contemporary interest in both of these communities in a common hardware model a set of workstation class machines connected by a high performance network The traditional Parallel Distributed distinction therefore appears under threat *Proceedings of the Sixth Euromicro Workshop on Parallel and Distributed Processing* Euromicro Workshop on Parallel and Distributed Processing,1998 This volume covers issues in parallel and distributed processing Coverage includes communications application caching scheduling distributed systems design and verification and real time data organization
