## **Parallel And Distributed Simulation Systems:**

*Parallel and Distributed Simulation Systems* Richard M. Fujimoto, 2000-01-03 From the preface page xv My goal in writing *Parallel and Distributed Simulation Systems* is to give an in depth treatment of technical issues concerning the execution of discrete event simulation programs on computing platforms composed of many processors interconnected through a network

*Parallel and Distributed Discrete Event Simulation* Carl Tropper, 2002 Discrete event simulation has long been an integral part of the design process of complex engineering systems and the modelling of natural phenomena Many of the systems that we seek to understand or control can be modelled as digital systems In a digital model we view the system at discrete instants of time in effect taking snapshots of the system at these instants For example in a computer network simulation an event can be the sending of a message from one node to another node while in a VLSI logic simulation the arrival of a signal at a gate may be viewed as an event Digital systems such as computer systems are naturally susceptible to this approach However a variety of other systems may also be modelled this way These include transportation systems such as air traffic control systems epidemiological models such as the spreading of a virus and military war gaming models This book is representative of the advances in this field

**Parallel and Distributed Simulation of Discrete Event Systems** Alois Ferscha, Satish K. Tripathi, 1994 Abstract The achievements attained in accelerating the simulation of the dynamics of complex discrete event systems using parallel or distributed multiprocessing environments are comprehensively presented While parallel discrete event simulation DES governs the evolution of the system over simulated time in an iterative SIMD way distributed DES tries to spatially decompose the event structure underlying the system and executes event occurrences in spatial subregions by logical processes LPs usually assigned to different physical processing elements Synchronization protocols are necessary in this approach to avoid timing inconsistencies and to guarantee the preservation of event causalities across LPs Included in the survey are discussions on the sources and levels of parallelism synchronous vs asynchronous simulation and principles of LP simulation In the context of conservative LP simulation Chandy Misra Bryant deadlock avoidance and deadlock detection recovery strategies Conservative Time Windows and the Carrier Nullmessage protocol are presented Related to optimistic LP simulation Time Warp Optimistic Time Windows memory management GVT computation probabilistic optimism control and adaptive schemes are investigated

**Large-Scale Computing Techniques for Complex System Simulations** Werner Dubitzky, Krzysztof Kurowski, Bernard Schott, 2012-02-03 Complex systems modeling and simulation approaches are being adopted in a growing number of sectors including finance economics biology astronomy and many more Technologies ranging from distributed computing to specialized hardware are explored and developed to address the computational requirements arising in complex systems simulations The aim of this book is to present a representative overview of

contemporary large scale computing technologies in the context of complex systems simulations applications The intention is to identify new research directions in this field and to provide a communications platform facilitating an exchange of concepts ideas and needs between the scientists and technologist and complex system modelers On the application side the book focuses on modeling and simulation of natural and man made complex systems On the computing technology side emphasis is placed on the distributed computing approaches but supercomputing and other novel technologies are also considered

**15th Workshop on Parallel and Distributed Simulation**, 2001 Annotation Consists of 22 papers presented at the May 2001 workshop dealing with conservative simulation optimistic simulation high level architecture applications and optimizing parallel simulation Some of the topics are improving lookahead in PDES of large scale applications using compiler analysis a causality based time management mechanism for federated simulation the dependence list in time warp and an agent based DDM for high level architecture Other topics include aviation modeling virtual time synchronization over unreliable network transport a scaled version of the elastic time algorithm and speedup of a sparse system simulation No subject index c Book News Inc

Economics of Grids, Clouds, Systems, and Services Massimo Coppola,Emanuele Carlini,Daniele D'Agostino,Jörn Altmann,José Ángel Bañares,2019-03-05 This book constitutes the refereed proceedings of the 15th International Conference on Economics of Grids Clouds Systems and Services GECON 2018 held in Pisa Italy in September 2018 The 21 full papers and 9 short papers presented together with 1 invited talk were carefully reviewed and selected from 40 submissions This GECON 2018 proceedings was structured in three special sessions on selected topics namely IT service ecosystems enabled through emerging digital technologies machine learning cognitive systems and data science for system management and blockchain technologies and economics

**Intelligent Systems in Oil Field Development under Uncertainty** Marco A. C. Pacheco, Marley M. B. R.

Velasco, 2009-04-27 The decision to invest in oil field development is an extremely complex problem even in the absence of uncertainty due to the great number of technological alternatives that may be used to the dynamic complexity of oil reservoirs which involves multiphase flows of oil, gas and water in porous media with phase change and to the complicated combinatorial optimization problem of choosing the optimal oil well network that is choosing the number and types of wells horizontal vertical directional multilateral required for draining oil from a field with a view to maximizing its economic value This problem becomes even more difficult when technical uncertainty and economic uncertainty are considered The former are uncertainties regarding the existence volume and quality of a reservoir and may encourage an investment in information before the field is developed in order to reduce these uncertainties and thus optimize the heavy investments required for developing the reservoir The economic or market uncertainties are associated with the general movements of the economy such as oil prices gas demand exchange rates etc and may lead decision makers to defer investments and wait for better market conditions Choosing the optimal investment moment under uncertainty is a complex problem which traditionally involves dynamic programming tools and other techniques that are used by the real options theory Proceedings of the Fifth Euromicro Workshop on Parallel and Distributed Processing, 1997
