**Theory and Practice of Parallel Programming** Takayasu Ito, Akinori Yonezawa, 1995-04-21 The biochemistry and molecular biology of wood is important to elucidate the characteristics of wood as a biomaterial For the understanding of the properties of wood and wood components it is necessary to investigate the characterization of genes encoding enzymes involved in the biosynthesis of wood components the differentiation of the cambium into phloem and xylem and the mechanisms of the expression of these genes The author gives an overview of the rapidly progressing research in the relatively new field of molecular biology of trees and wood     **Data Flow Computing** John A. Sharp, 1992 There is an increasing interest in data flow programming techniques

This interest is motivated in part by the rapid advances in technology and the need for distributed processing techniques in part by a desire for faster throughput by applying parallel processing techniques and in part by search for a programming tool that is closer to the problem solving methods that people naturally adopts rather than current programming languages This book contains a selection of chapters by researchers on various aspects of the data flow approach in computing Topics covered include comparisons of various data flow machine designs data flow architectures intentional programming and operator nets and the relationship between data flow models and modern structured design techniques among others The book also includes a brief introduction to the data flow approach a bibliography and reviews of where research into data flow might be heading *Parallel Computing* ,1986 **Process Interaction Models** Steven Ericsson-zenith,2011-07 Process interaction models are an integral component of parallel computing theory and practice defining the means by which concurrent processes interact where interaction means not only the exchange of data but also synchronization between processes In the search for a general purpose model to program parallel computers and reason about the partial orders of data in such systems it is desirable to provide portability an expressiveness that does not distract the programmer from the task in hand and efficiency independent of the memory architecture of the machine This book discusses these issues and presents a new model In this process oriented model a program is a collection of processes that execute concurrently constructing and interacting via strictly typed shared data structures called Contexts Steven Ericsson Zenith was a member of the Computer Architecture team at the British Semiconductor company INMOS STMicroelectronics during the development of the Transputer microprocessor a device designed for large scale parallel computing He was also involved in the design of the parallel programming language Occam and is the author of the Occam 2 Reference Manual published by Prentice Hall Following his work on Occam he was invited to continue research at YALE University with Professor David Gelernter on the coordination language Linda This book completed in 1992 arises from this experience and the research that followed at the Ecole Nationale Sup rieure des Mines de Paris and the Universit Pierre et Marie Curie traditionally the science department of the Sorbonne
