Parallel Algorithms And Architectures:

Parallel Algorithms & Architectures Michel Cosnard, 1986 *Introduction to Parallel Algorithms and Architectures* F. Thomson Leighton, 2014-05-12 Introduction to Parallel Algorithms and Architectures Arrays Trees Hypercubes provides an introduction to the expanding field of parallel algorithms and architectures This book focuses on parallel computation involving the most popular network architectures namely arrays trees hypercubes and some closely related networks Organized into three chapters this book begins with an overview of the simplest architectures of arrays and trees This text then presents the structures and relationships between the dominant network architectures as well as the most efficient parallel algorithms for a wide variety of problems Other chapters focus on fundamental results and techniques and on rigorous analysis of algorithmic performance This book discusses as well a hybrid of network architecture based on arrays and trees called the mesh of trees The final chapter deals with the most important properties of hypercubes This book is a valuable resource for readers with a general technical background **Introduction to Parallel Processing** Behrooz Parhami, 1999-01-31 This original text provides comprehensive coverage of parallel algorithms and architectures beginning with fundamental concepts and continuing through architectural variations and aspects of implementation Unlike the authors of similar texts Professor Parhami reviews the circuit model and problem driven parallel machines variants of mesh architectures and composite and hierarchical systems among other subjects With its balanced treatment of theory and practical designs classtested lecture material and problems and helpful case studies the book is suited to graduate and upperlevel undergraduate students of advanced architecture or parallel processing **Introduction to Parallel Algorithms and Architectures** Frank Thomson Leighton, 1992 *Mathematics of Computing Parallelism* *Parallel Algorithms and Architectures* Michel Cosnard, Denis Trystram, 1995 *A Parallel Algorithm Synthesis Procedure for High-Performance Computer Architectures* Ian N. Dunn, Gerard G.L. Meyer, 2003-04-30 Despite five decades of research parallel computing remains an exotic frontier technology on the fringes of mainstream computing Its much heralded triumph over sequential computing has yet to materialize This is in spite of the fact that the processing needs of many signal processing applications continue to eclipse the capabilities of sequential computing The culprit is largely the software development environment Fundamental shortcomings in the development environment of many parallel computer architectures thwart the adoption of parallel computing Foremost parallel computing has no unifying model to accurately predict the execution time of algorithms on parallel architectures Cost and scarce programming resources prohibit deploying multiple algorithms and partitioning strategies in an attempt to find the fastest solution As a consequence algorithm design is largely an intuitive art form dominated by practitioners who specialize in a particular computer architecture This coupled with the fact that parallel computer architectures rarely last more than a couple of years makes for a complex and challenging design environment To navigate this environment algorithm designers need a road map a detailed procedure

they can use to efficiently develop high performance portable parallel algorithms The focus of this book is to draw such a road map The Parallel Algorithm Synthesis Procedure can be used to design reusable building blocks of adaptable scalable software modules from which high performance signal processing applications can be constructed The hallmark of the procedure is a semi systematic process for introducing parameters to control the partitioning and scheduling of computation and communication This facilitates the tailoring of software modules to exploit different configurations of multiple processors multiple floating point units and hierarchical memories To showcase the efficacy of this procedure the book presents three case studies requiring various degrees of optimization for parallel execution This book can be used as a reference for algorithm designers or as a text for an advanced course on parallel programming **Parallel Algorithms & Architectures**

Bayoumi,2012-12-06 Over the past few years the demand for high speed Digital Signal Processing DSP has increased dramatically New applications in real time image processing satellite communications radar signal processing pattern recognition and real time signal detection and estimation require major improvements at several levels algorithmic architectural and implementation These performance requirements can be achieved by employing parallel processing at all levels Very Large Scale Integration VLSI technology supports and provides a good avenue for parallelism Parallelism offers efficient solutions to several problems which can arise in VLSI DSP architectures such as 1 Intermediate data communication and routing several DSP algorithms such as FFT involve excessive data routing and reordering Parallelism is an efficient mechanism to minimize the silicon cost and speed up the processing time of the intermediate middle stages 2 Complex DSP applications the required computation is almost doubled Parallelism will allow two similar channels processing at the same time The communication between the two channels has to be minimized 3 Application specific systems this emerging approach should achieve real time performance in a cost effective way 4 Testability and fault tolerance reliability has become a required feature in most of DSP systems To achieve such property the involved time overhead is significant Parallelism may be the solution to maintain acceptable speed performance **ACM Symposium on Parallel Algorithms and Architectures** Symposium on Parallel Algorithms and Architectures,Symposium on Parallel Algorithms and Architectures. 4, 1992, San Diego, Calif.,Association for Computing Machinery,Paul Spirakis,1994 Parallel Algorithms and Architectures Andreas Albrecht,Hermann Jung,Kurt Mehlhorn,2022-01-19 Keine ausführliche
