High-Performance Parallel Database Processing and Grid Databases David Taniar,Clement

H. C. Leung,Wenny Rahayu,Sushant Goel,2008-09-17 The latest techniques and principles of parallel and grid database processing The growth in grid databases coupled with the utility of parallel query processing presents an important opportunity to understand and utilize high performance parallel database processing within a major database management system DBMS This important new book provides readers with a fundamental understanding of parallelism in data intensive applications and demonstrates how to develop faster capabilities to support them It presents a balanced treatment of the theoretical and practical aspects of high performance databases to demonstrate how parallel query is executed in a DBMS including concepts algorithms analytical models and grid transactions High Performance Parallel Database Processing and Grid Databases serves as a valuable resource for researchers working in parallel databases and for practitioners interested in building a high performance database It is also a much needed self contained textbook for database courses at the advanced undergraduate and graduate levels

Structured Peer-to-Peer Systems Dmitry Korzun,Andrei Gurtov,2012-11-12 The field of structured

P2P systems has seen fast growth upon the introduction of Distributed Hash Tables DHTs in the early 2000s The first proposals including Chord Pastry Tapestry were gradually improved to cope with scalability locality and security issues By utilizing the processing and bandwidth resources of end users the P2P approach enables high performance of data distribution which is hard to achieve with traditional client server architectures The P2P computing community is also being actively utilized for software updates to the Internet P2PSIP VoIP video on demand and distributed backups The recent introduction of the identifier locator split proposal for future Internet architectures poses another important application for DHTs namely mapping between host permanent identity and changing IP address The growing complexity and scale of modern P2P systems requires the introduction of hierarchy and intelligence in routing of requests Structured Peer to Peer Systems covers fundamental issues in organization optimization and tradeoffs of present large scale structured P2P systems as well as provides principles analytical models and simulation methods applicable in designing future systems Part I presents the state of the art of structured P2P systems popular DHT topologies and protocols and the design challenges for efficient P2P network topology organization routing scalability and security Part II shows that local strategies with limited knowledge per peer provide the highest scalability level subject to reasonable performance and security constraints Although

the strategies are local their efficiency is due to elements of hierarchical organization which appear in many DHT designs that traditionally are considered as flat ones Part III describes methods to gradually enhance the local view limit when a peer is capable to operate with larger knowledge still partial about the entire system These methods were formed in the evolution of hierarchical organization from flat DHT networks to hierarchical DHT architectures look ahead routing and topology aware ranking Part IV highlights some known P2P based experimental systems and commercial applications in the modern Internet The discussion clarifies the importance of P2P technology for building present and future Internet systems

Combating Security Challenges in the Age of Big Data Zubair Md. Fadlullah,Al-Sakib Khan Pathan,2020-05-26 This book addresses the key security challenges in the big data centric computing and network systems and discusses how to tackle them using a mix of conventional and state of the art techniques The incentive for joining big data and advanced analytics is no longer in doubt for businesses and ordinary users alike Technology giants like Google Microsoft Amazon Facebook Apple and companies like Uber Airbnb NVIDIA Expedia and so forth are continuing to explore new ways to collect and analyze big data to provide their customers with interactive services and new experiences With any discussion of big data security is not however far behind Large scale data breaches and privacy leaks at governmental and financial institutions social platforms power grids and so forth are on the rise that cost billions of dollars The book explains how the security needs and implementations are inherently different at different stages of the big data centric system namely at the point of big data sensing and collection delivery over existing networks and analytics at the data centers Thus the book sheds light on how conventional security provisioning techniques like authentication and encryption need to scale well with all the stages of the big data centric system to effectively combat security threats and vulnerabilities The book also uncovers the state of the art technologies like deep learning and blockchain which can dramatically change the security landscape in the big data era

Resource Management in Utility and Cloud Computing Han Zhao,Xiaolin Li,2013-10-17 This SpringerBrief reviews the existing market oriented strategies for

economically managing resource allocation in distributed systems It describes three new schemes that address cost efficiency user incentives and allocation fairness with regard to different scheduling contexts The first scheme taking the Amazon EC2TM market as a case of study investigates the optimal resource rental planning models based on linear integer programming and stochastic optimization techniques This model is useful to explore the interaction between the cloud infrastructure provider and the cloud resource customers The second scheme targets a free trade resource market studying

the interactions amongst multiple rational resource traders Leveraging an optimization framework from AI this scheme examines the spontaneous exchange of resources among multiple resource owners Finally the third scheme describes an experimental market oriented resource sharing platform inspired by eBay s transaction model The study presented in this book sheds light on economic models and their implication to the utility oriented scheduling problems

Cooperating Embedded Systems and Wireless Sensor Networks Michel

Banatre,2008-04-04 A number of different system concepts have become apparent in the broader context of embedded systems over the past few years Whilst there are some differences between these this book argues that in fact there is much they share in common particularly the important notions of control heterogeneity wireless communication dynamics ad hoc nature and cost The first part of the book covers cooperating object applications and the currently available application scenarios such as control and automation healthcare and security and surveillance The second part discusses paradigms for algorithms and interactions The third part covers various types of vertical system functions including data aggregation resource management and time synchronization The fourth part outlines system architecture and programming models outlining all currently available architectural models and middleware approaches that can be used to abstract the complexity of cooperating object technology Finally the book concludes with a discussion of the trends guiding current research and gives suggestions as to possible future developments and how various shortcomings in the technology can be overcome
