Parallel Processing for Scientific Computing Michael A. Heroux,Padma Raghavan,Horst D. Simon,2006-01-01

Parallel processing has been an enabling technology in scientific computing for more than 20 years This book is the first in
depth discussion of parallel computing in 10 years it reflects the mix of topics that mathematicians computer scientists and
computational scientists focus on to make parallel processing effective for scientific problems Presently the impact of parallel
processing on scientific computing varies greatly across disciplines but it plays a vital role in most problem domains and is
absolutely essential in many of them Parallel Processing for Scientific Computing is divided into four parts The first concerns
performance modeling analysis and optimization the second focuses on parallel algorithms and software for an array of
problems common to many modeling and simulation applications the third emphasizes tools and environments that can ease
and enhance the process of application development and the fourth provides a sampling of applications that require parallel
computing for scaling to solve larger and realistic models that can advance science and engineering *Government Reports*
