Parametric and Nonparametric Inference from Record-Breaking Data Sneh Gulati, William J. Padgett, 2003-01-27

By providing a comprehensive look at statistical inference from record breaking data in both parametric and nonparametric settings this book treats the area of nonparametric function estimation from such data in detail. Its main purpose is to fill this void on general inference from record values. Statisticians, mathematicians and engineers will find the book useful as a research reference. It can also serve as part of a graduate level statistics or mathematics course.

Spatial Statistics and Computational Methods Jesper Møller, 2013-04-17 Spatial statistics and Markov Chain Monte Carlo MCMC techniques have each undergone major developments in the last decade. Also these two areas are mutually reinforcing because MCMC methods are often necessary for the practical implementation of spatial statistical inference while new spatial stochastic models in turn motivate the development of improved MCMC algorithms. This volume shows how sophisticated spatial statistical and computational methods apply to a range of problems of increasing importance for applications in science and technology. It consists of four chapters: 1. Petros Dellaportas and Gareth O. Roberts give a tutorial on MCMC methods, the computational methodology which is essential for virtually all the complex spatial models to be considered in subsequent chapters. 2. Peter J. Diggle, Paulo J. Ribeiro Jr and Ole F. Christensen introduce the reader to the model based approach to geostatistics, i.e. the application of general statistical principles to the formulation of explicit stochastic models for geostatistical data and to inference within a declared class of models. 3. Merrilee A. Hurn, Oddvar K. Husby and Håvard Rue discuss various aspects of image analysis, ranging from low to high level tasks and illustrated with different examples of applications. 4. Jesper Møller and Rasmus P. Waggepetersen collect recent theoretical advances in simulation based inference for spatial point processes and discuss some examples of applications. The volume introduces topics of current interest in spatial and computational statistics which should be accessible to postgraduate students as well as to experienced statistical researchers. It is partly based on the course material for the TMR and MaPhySto Summer School on Spatial Statistics and Computational Methods held at Aalborg University Denmark August 19-22 2001.

Statistics on Special Manifolds Yasuko Chikuse, 2003-02-06 Covering statistical analysis on the two special manifolds the Stiefel manifold and the Grassmann manifold this book is designed as a reference for both theoretical and applied statisticians. It will also be used as a textbook for a graduate course in multivariate analysis. It is assumed that the reader is familiar with the usual theory of univariate statistics and a thorough background in mathematics in particular knowledge of multivariate calculation techniques.

Survival Analysis: State of the Art John P. Klein, P.K. Goel, 2013-03-09 Survival analysis is a highly active area of research with applications spanning the physical, engineering, biological and social sciences. In addition to statisticians and biostatisticians, researchers in this area include epidemiologists, reliability engineers, demographers and economists. The

economists survival analysis by the name of duration analysis and the analysis of transition data We attempted to bring together leading researchers with a common interest in developing methodology in survival analysis at the NATO Advanced Research Workshop The research works collected in this volume are based on the presentations at the Workshop Analysis of survival experiments is complicated by issues of censoring where only partial observation of an individual's life length is available and left truncation where individuals enter the study group if their life lengths exceed a given threshold time Application of the theory of counting processes to survival analysis as developed by the Scandinavian School has allowed for substantial advances in the procedures for analyzing such experiments The increased use of computer intensive solutions to inference problems in survival analysis in both the classical and Bayesian settings is also evident throughout the volume

Several areas of research have received special attention in the volume Theory and Practice of Risk Assessment Christos P. Kitsos, Teresa A. Oliveira, Alexandros Rigas, Sneh Gulati, 2015-05-18 This book covers the latest results in the field of risk analysis Presented topics include probabilistic models in cancer research models and methods in longevity epidemiology of cancer risk engineering reliability and economical risk problems The contributions of this volume originate from the 5th International Conference on Risk Analysis ICRA 5 The conference brought together researchers and practitioners working in the field of risk analysis in order to present new theoretical and computational methods with applications in biology environmental sciences public health economics and finance
