Doney, 2007-04-19 Lévy processes i.e processes in continuous time with stationary and independent

increments are named after Paul Levy who made the connection with infinitely divisible distributions and described their structure. They form a flexible class of models which have been applied to the study of storage processes, insurance risk, queues, turbulence, laser cooling, and of course finance, where the feature that they include examples having heavy tails is particularly important. Their sample path behaviour poses a variety of difficult and fascinating problems. Such problems and also some related distributional problems are addressed in detail in these notes that reflect the content of the course given by R Doney in St Flour in 2005. Peter Giesl, 2007-04-04. The basin of attraction of an equilibrium of an ordinary differential equation can be determined using a Lyapunov function. A new method to construct such a Lyapunov function using radial basis functions is presented in this volume intended for researchers and advanced students from both dynamical systems and radial basis functions. Besides an introduction to both areas and a detailed description of the method, it contains error estimates and many examples. Local and Semi-Local Bifurcations in Hamiltonian Dynamical Systems. Heinz Hanßmann, 2007. Once again KAM theory is committed in the context of nearly integrable Hamiltonian systems. While elliptic and hyperbolic tori determine the distribution of maximal invariant tori, they themselves form n parameter families. Hence without the need for untypical conditions or external parameters, torus bifurcations of high co-dimension may be found in a single given Hamiltonian system. The text moves gradually from the integrable case in which symmetries allow for reduction to bifurcating equilibria to non-integrability where smooth parametrisations have to be replaced by Cantor sets. Planar singularities and their versal unfoldings are an important ingredient that helps to explain the underlying dynamics in a transparent way. **Tutorials in Mathematical Biosciences**, 2005. Singular Coverings of Toposes. Marta Bunge, Jonathon Funk, 2006-08-21. This volume presents a self-contained theory of certain singular coverings of toposes including branched coverings. This book is distinguished from classical treatments of the subject by its unexpected connection with a topic from functional analysis, namely distributions. Although primarily aimed at topos theorists, this book may also be used as a textbook for advanced graduate courses introducing topos theory with an emphasis on geometric applications. **Australian Economic Papers**, 2005. **Punctured Torus Groups and 2-bridge Knot Groups**, 2007. *Deutsche Nationalbibliografie*. Die deutsche Nationalbibliothek, 2008. Intersections de deux quadriques et pinceaux de courbes de genre 1. Olivier Wittenberg, 2007-02-09. Cet ouvrage est consacré à l'arithmétique des surfaces fibrées en courbes de genre 1 au-dessus de la droite projective et à l'arithmétique des intersections de deux quadriques dans l'espace projectif. Swinnerton-Dyer introduisit en 1993 une technique permettant d'étudier les points rationnels des pinceaux de courbes de genre 1.
