Making Of Geography:

The Making of Geography Robert Eric Dickinson, Osbert John Radcliffe Howarth, 1933 *Envisioning Landscapes, Making Worlds* Stephen Daniels, Dydia DeLyser, J. Nicholas Entrikin, Doug Richardson, 2012-03-15 The past decade has witnessed a remarkable resurgence in the intellectual interplay between geography and the humanities in both academic and public circles. The metaphors and concepts of geography now permeate literature, philosophy and the arts. Concepts such as space, place, landscape, mapping and territory have become pervasive as conceptual frameworks and core metaphors in recent publications by humanities scholars and well-known writers. *Envisioning Landscapes* and *Making Worlds* contain over twenty-five contributions from leading scholars who have engaged this vital intellectual project from various perspectives both inside and outside of the field of geography. The book is divided into four sections representing different modes of examining the depth and complexity of human meaning invested in maps attached to landscapes and embedded in the spaces and places of modern life. The topics covered range widely and include interpretations of space, place and landscape in literature and the visual arts, philosophical reflections on geographical knowledge, cultural imagination in scientific exploration and travel accounts, and expanded geographical understanding through digital and participatory methodologies. The clashing and blending of cultures caused by globalization and the new technologies that profoundly alter human environmental experience suggest new geographical narratives and representations that are explored here by a multidisciplinary group of authors. This book is essential reading for students, scholars and interested general readers seeking to understand the new synergies and creative interplay emerging from this broad intellectual engagement with meaning and geographic experience.

Research and Debate in Primary Geography Simon Catling, 2017-10-02 This book brings together recent papers which make important contributions to understanding and developing primary geography. It considers primary teachers' and trainee teachers' knowledge of geography, how the primary curriculum uses geography, teachers' planning of geography teaching, the way in which aspects of geography are taught, what high-quality geography might look like and children's geographical understanding and voices. Though geography

curricula change quite often in countries around the world the core matters noted above remain of constant and vital importance The papers in this book either concern research with primary teachers and children or consider key concerns in primary geography providing important perspectives for thinking about future developments in geography teaching and curriculum initiatives in primary schools This is a stimulating and enticing collection written by leading exponents of and experts in primary geography education This book was originally published as a special issue of Education 3 13

XSLT Doug Tidwell,2008-03-15 There's been great anticipation surrounding the release of XSLT 2.0 the new language specification that's critical for converting XML documents into other formats such as HTML code or a PDF file The XSLT 2.0 specification is approaching completion at long last but unfortunately version 2.0's delays and complexity have forced developers to rely on the XSLT 1.0 standard longer than they anticipated Both specifications will be in use during what is likely to be a long transition period The second edition of XSLT incorporates new material for XSLT 2.0 and expounds on the lessons learned over the last six years of XSLT 1.0 use Whether you're looking for the latest and greatest in XSLT 1.0 techniques or is moving on to XSLT 2.0 this new edition of XSLT will address your needs The book includes plenty of practical real world examples to show you how to apply XSLT stylesheets to XML data using either version You'll get a thorough understanding of XSLT and XPath and their relationship to other web standards along with recommendations for a honed toolkit in an open platform neutral standards based environment Author Doug Tidwell starts with the basics simple stylesheets and methods for setting up transformation engines Then he works through examples that develop your understanding of the many parts of XSLT particularly XSLT's template based approach to transformations This new edition has been updated to explain XSLT 2.0's many dependencies notably XML Schema and XPath 2.0
