

MAKING MODERN SCIENCE

A HISTORICAL SURVEY

SECOND EDITION

PETER J. BOWLER
AND IWAN RHYS MORUS

Making Modern Science

R Barnett

Making Modern Science:

Making Modern Science Peter J. Bowler, Iwan Rhys Morus, 2010-02-24 The development of science according to respected scholars Peter J Bowler and Iwan Rhys Morus expands our knowledge and control of the world in ways that affect but are also affected by society and culture In Making Modern Science a text designed for introductory college courses in the history of science and as a single volume introduction for the general reader Bowler and Morus explore both the history of science itself and its influence on modern thought Opening with an introduction that explains developments in the history of science over the last three decades and the controversies these initiatives have engendered the book then proceeds in two parts The first section considers key episodes in the development of modern science including the Scientific Revolution and individual accomplishments in geology physics and biology The second section is an analysis of the most important themes stemming from the social relations of science the discoveries that force society to rethink its religious moral or philosophical values Making Modern Science thus chronicles all major developments in scientific thinking from the revolutionary ideas of the seventeenth century to the contemporary issues of evolutionism genetics nuclear physics and modern cosmology Written by seasoned historians this book will encourage students to see the history of science not as a series of names and dates but as an interconnected and complex web of relationships between science and modern society The first survey of its kind Making Modern Science is a much needed and accessible introduction to the history of science engagingly written for undergraduates and curious readers alike

Making Modern Science, Second Edition Peter J. Bowler, Iwan Rhys Morus, 2020-08-17 In this new edition of the top selling coursebook seasoned historians Peter J Bowler and Iwan Rhys Morus expand on their authoritative survey of how the development of science has shaped our world Exploring both the history of science and its influence on modern thought the authors chronicle the major developments in scientific thinking from the revolutionary ideas of the seventeenth century to contemporary issues in genetics physics and more Thoroughly revised and expanded the second edition draws on the latest research and scholarship It also contains two entirely new chapters one that explores the impact of computing on the development of science and another that shows how the West used science and technology as tools for geopolitical expansion Designed for entry level college courses and as a single volume introduction for the general reader Making Modern Science presents the history of science not as a series of names and dates but as an interconnected and complex web of relationships joining science and society

Making Modern Science Peter J. Bowler, Iwan Rhys Morus, 2020 Making Modern Science A Historical Survey is a top selling coursebook designed for entry level college classes in the history of science and as a single volume introduction for the general reader Exploring both the history of science and its influence on modern thought this general survey chronicles all major developments in scientific thinking from the revolutionary ideas of the seventeenth century to contemporary issues in genetics physics and more First published fifteen years ago this revised edition is not only updated to reflect the latest scholarship it also contains two

entirely new chapters on computing and empire **Making Modern Science** Peter J. Bowler, Iwan Rhys Morus, 2005-05-01
The development of science according to respected scholars Peter J Bowler and Iwan Rhys Morus expands our knowledge and control of the world in ways that affect but are also affected by society and culture In *Making Modern Science* a text designed for introductory college courses in the history of science and as a single volume introduction for the general reader Bowler and Morus explore both the history of science itself and its influence on modern thought Opening with an introduction that explains developments in the history of science over the last three decades and the controversies these initiatives have engendered the book then proceeds in two parts The first section considers key episodes in the development of modern science including the Scientific Revolution and individual accomplishments in geology physics and biology The second section is an analysis of the most important themes stemming from the social relations of science the discoveries that force society to rethink its religious moral or philosophical values *Making Modern Science* thus chronicles all major developments in scientific thinking from the revolutionary ideas of the seventeenth century to the contemporary issues of evolutionism genetics nuclear physics and modern cosmology Written by seasoned historians this book will encourage students to see the history of science not as a series of names and dates but as an interconnected and complex web of relationships between science and modern society The first survey of its kind *Making Modern Science* is a much needed and accessible introduction to the history of science engagingly written for undergraduates and curious readers alike

MAKING MODERN SCIENCE BOWLER AND MORUS, 2021 *The Making of Modern Science* David Knight, 2013-04-26
Of all the inventions of the nineteenth century the scientist is one of the most striking In revolutionary France the science student taught by men active in research was born and a generation later the graduate student doing a PhD emerged in Germany In 1833 the word scientist was coined forty years later science increasingly specialised was becoming a profession Men of science rivalled clerics and critics as sages they were honoured as national treasures and buried in state funerals Their new ideas invigorated the life of the mind Peripatetic congresses great exhibitions museums technical colleges and laboratories blossomed and new industries based on chemistry and electricity brought prosperity and power economic and military Eighteenth century steam engines preceded understanding of the physics underlying them but electric telegraphs and motors were applied science based upon painstaking interpretation of nature The ideas discoveries and inventions of scientists transformed the world lives were longer and healthier cities and empires grew societies became urban rather than agrarian the local became global And by the opening years of the twentieth century science was spreading beyond Europe and North America and women were beginning to be visible in the ranks of scientists Bringing together the people events and discoveries of this exciting period into a lively narrative this book will be essential reading both for students of the history of science and for anyone interested in the foundations of the world as we know it today **The Birth of Modern Science** Paolo Rossi, 2001-06-08 This history of the birth of modern science shatters the illusion that

science is dry and divorced from culture by exploring the powerful clashes between traditions and value systems that gave rise to it The author shows how many of the characteristics that distinguish science today emerged in the midst of the wars and plagues of the seventeenth century and defines what was new about this form of knowledge *Domesticity in the Making of Modern Science* Donald L. Opitz, Staffan Bergwik, Brigitte Van Tiggelen, 2016-01-26

The history of the modern sciences has long overlooked the significance of domesticity as a physical social and symbolic force in the shaping of knowledge production This book provides a welcome reorientation to our understanding of the making of the modern sciences globally by emphasizing the centrality of domesticity in diverse scientific enterprises **Multicivilizational**

Exchanges in the Making of Modern Science Arun Bala, Raymond W. K. Lau, Jianjun Mei, 2024-09-09 This book explores how and why exchanges across civilizations have come to enrich science today The dialogical dimension of the history of science has long been marginalized by an excessive concern on why modern science emerged in Europe but not in any of the advanced civilizations of the East This focus upon what has been called Joseph Needham s Grand Comparative Question ignores his other project focused on showing how dialogues between civilizations have nurtured science Needham s Grand Dialogical Question if we may call it that by parity has directly or indirectly inspired a vast body of literature showing how interconnections of civilizations over the last three thousand years and exchanges of cosmological mathematical geographical physical biological and medical technologies techniques practices and knowledge have been woven together to produce current science Bringing together scholars whose research range across multiple civilizations and disciplines this book investigates the scope and limits of Needham s dialogical vision for science **Unani Medicine in the Making** Kira

Schmidt-Stiedenroth, 2025-10-01 *Unani Medicine in the Making* examines the institutions and practices of Unani medicine the Graeco Islamic healing practice based on the humoral theory attributed to Hippocrates and officially recognized as a system of medicine in India Drawing on diverse materials including Urdu sources interviews with practitioners and observations in clinics the book explores what Unani medicine is today by attending to its multiplicity scrutinizing apparent tensions between the understanding of Unani as a system of medicine and its multiple enactments as Islamic medicine medical science or alternative medicine Ethnographic details provide vivid descriptions of the current practice of Unani in India and invite readers to rethink the idea that humoral medicine is incommensurable with modern medicine and science and that the modernization of Asian medicines invariably leads to their biomedicalization Ultimately the book also discusses the relationship of Unani with Muslim communities examining the growing practice of Prophetic Medicine in Urban India and increasing representations of Unani as Islamic Medicine *After the Monkey Trial* Christopher M. Rios, 2014-08-28

This study sheds light on the work of the evangelical scientists who sought to bridge the cultural divide Christianity and evolutionary theory In the well known Scopes Monkey Trial of 1925 famously portrayed in the film and play *Inherit the Wind* William Jennings Bryan s clashed with defense attorney Clarence Darrow The drama pitting fundamentalist fervor against

aggressive agnosticism illustrated what current scholars call the conflict thesis. Regardless of the actual legal question of the trial, it appeared as though Christianity and science were at war with each other. Decades later, a new generation of evangelical scientists struggled to restore peace. After the Monkey Trial is the compelling history of those evangelical scientists in Britain and America who, unlike their fundamentalist cousins, supported mainstream scientific conclusions of the world and resisted the anti-science impulses of the era. Christopher M. Rios focuses on two organizations: the American Scientific Affiliation and the Research Scientists Christian Fellowship, today Christians in Science, who for more than six decades have worked to reshape evangelical engagement with science and redefine what it means to be a creationist.

What is Islamic Studies? Philip Wood, Leif Stenberg, 2022-01-05. The study of Islam and Muslims in Europe and North America has expanded greatly in recent decades, becoming a passionately debated and divided field. This collection critically assesses the development of the field of Islamic Studies and its place in society. Featuring contributions from anthropologists, historians, and scholars of religion, each chapter contains new empirical material and discusses approaches to the study of Islam past and present. The book situates Islamic Studies within broader discussions of the construction of identity and its political implications in Europe and North America. Authors also address tensions between normative and non-normative approaches to the study of Islam and Muslims and consider how these might be reconciled.

How to Make Creamery Butter on the Farm William John McLaughlin, Amanda Kuchenbecker McLaughlin, 1915. **Educational Review**, 1894.

Nature's Body Londa L. Schiebinger, 2004. Eighteenth-century natural historians created a peculiar and peculiarly durable vision of nature, one that embodied the sexual and racial tensions of that era. When plants were found to reproduce sexually, eighteenth-century botanists ascribed to them passionate relations: polyandrous marriages and suicidal incest. Accounts of steamy plant sex began to infiltrate the botanical literature of the day. Naturalists also turned their attention to the great apes just becoming known to eighteenth-century Europeans, clothing the females in silk vestments and training them to sip tea with the modest demeanor of English matrons, while imagining the males of the species fully capable of ravishing women.

Journal of Education, 1908 The Profession of Home Making, 1911 **The Index**, 1876 **Religion in the Making** Samuel George Smith, 1910 *Science* John Michels (Journalist), 1920

Unveiling the Magic of Words: A Review of "**Making Modern Science**"

In some sort of defined by information and interconnectivity, the enchanting power of words has acquired unparalleled significance. Their capability to kindle emotions, provoke contemplation, and ignite transformative change is really awe-inspiring. Enter the realm of "**Making Modern Science**," a mesmerizing literary masterpiece penned by a distinguished author, guiding readers on a profound journey to unravel the secrets and potential hidden within every word. In this critique, we shall delve to the book is central themes, examine its distinctive writing style, and assess its profound affect the souls of its readers.
