**Exploitation and Overexploitation in Societies Past and Present** Brigitta Benzing, Bernd Herrmann, 2003 Human impact on landscape can be conceptualised in terms of socially governed ecological systems In the past the adaptive capacity of human cultural systems has been emphasised Nowadays a shift can be recognised towards modified views Resources are discussed as prerequisites for establishing complex human societies This includes also a more biologically minded view from the standpoint of the humanities In such a view human societal complexes can be understood as systems that manage energy and matters The concept of social metabolic regimes has developed in such a context Cultures as seen within this paradigm are not understood merely as autopoietic symbolic entities but as results of an interaction of material prerequisites and emerging social structures One might dismiss this as an epistemological shift part of the play of science with itself But it remains unsolved so far in terms of evolutionary theory if the ultimate goal of evolution is reproductive success or access
