Handbook of Climate Change and Biodiversity Walter Leal Filho,Jelena Barbir,Richard Preziosi,2018-08-28 This book comprehensively describes essential research and projects on climate change and biodiversity Moreover it includes contributions on how to promote the climate agenda and biodiversity conservation at the local level Climate change as a whole and global warming in particular are known to have a negative impact on biodiversity in three main ways Firstly increases in temperatures are detrimental to a number of organisms especially those in sensitive habitats such as coral reefs and rainforests Secondly the pressures posed by a changing climate may lead to sets of responses in areas as varied as phenology range and physiology of living organisms often leading to changes in their lifecycles especially but not only in reproduction losses in productivity or even death In some cases the very survival of very sensitive species may be endangered Thirdly the impacts of climate change on biodiversity will be felt in the short term with regard to some species and ecosystems but also in the medium and long term in many biomes Indeed if left unchecked some of these impacts may be irreversible Many individual governments financial institutes and international donors are currently spending billions of dollars on projects addressing climate change and biodiversity but with little coordination Quite often the emphasis is on adaptation efforts with little emphasis on the connections between physio ecological changes and the lifecycles and metabolisms of fauna and flora or the influence of poor governance on biodiversity As such there is a recognized need to not only better understand the impacts of climate change on biodiversity but to also identify test and implement measures aimed at managing the many risks that climate change poses to fauna flora and micro organisms In particular the question of how to restore and protect ecosystems from the impact of climate change also has to be urgently addressed This book was written to address this need The respective papers explore matters related to the use of an ecosystem based approach to increase local adaptation capacity consider the significance of a protected areas network in preserving biodiversity in a changing northern European climate and assess the impacts of climate change on specific species including wild terrestrial animals The book also presents a variety of case studies such as the Yellowstone to Yukon Conservation Initiative the effects of climate change on the biodiversity of Aleppo pine forest in Senalba Algeria climate change and biodiversity response in the
