has happened since the articles were first written A number of new articles have been added where topics have either developed from fragmentary discussions in the early 1990s or have been created ab initio since the publication of the Encyclopedia These extensive volumes are unique in their coverage with a balance between imaging physics spectroscopy and clinical studies In many ways they reflect the scope covered by the major international in vivo NMR Societies with a conscious effort to allow the reader to understand all the elements that make up modern clinical magnetic resonance Equally the topic is so huge and still evolving so fast in detail rather than concept that they can act as no more than an introduction though at quite a demanding level The reader will appreciate the extent nature and dynamics of human and animal magnetic resonance and will have the route map to allow them to find any further information they may need
