The Modulor and Modulor 2 Fondation Le Corbusier,2015-04-24 In the years 1942 to 1948 Le Corbusier developed a system of measurements which became known as Modulor Based on the Golden Section and Fibonacci numbers and also using the physical dimensions of the average human Modulor is a sequence of measurements which Le Corbusier used to achieve harmony in his architectural compositions Le Modulor was published in 1950 and after meeting with success Le Corbusier went on to publish Modulor 2 in 1955 In many of Le Corbusier s most notable buildings including the Chapel at Ronchamp and the Unit d habitation evidence of his Modulor system can be seen These two volumes form an important and integral part of Le Corbusier s theoretical writings *The Modulor* Le Corbusier,2000 *Modulor 2. illuminates the complex interplay between Deleuze and Guattari s philosophy and architecture Presenting their wide ranging impact on late 20th and 21st century architecture each chapter focuses on a core Deleuzian Guattarian philosophical concept and one key work of architecture which evokes contorts or extends it Challenging the idea that a concept or theory defines and then produces the physical work and not vice versa Chris L Smith positions the relationship between Deleuze and Guattari s philosophy and the field of architecture as one that is mutually substantiating and constitutive In this framework modes of architectural production and experimentation become inextricable from the conceptual territories defined by these two key thinkers producing a rigorous discussion of theoretical practical and experimental engagements with their ideas
