Molecular Complexes:

Crystalline Molecular Complexes and Compounds Frank H. Herbstein, 2005 This book provides an account of the structure and properties of crystalline binary adducts Such crystals are perhaps better known as molecular compounds and complexes and are estimated to make up one quarter of the world's crystals More than 600 figures 200 tables and 3500 references are included in the book **Molecular Complexes** Robert Sanderson Mulliken, Willis B. Person, 1969 **Structure and Dynamics of Weakly Bound Molecular Complexes** Alfons Weber, 2012-12-06 The study of weakly bound molecular complexes has in recent years brought this field of investigation to the forefront of physical and chemical research The scope of the subject is wide and different terminology and nomenclature is current among the various subspecialties Thus the term metal cluster often connotes to the organic chemist a metal organic compound while the physicist will more likely think of groups of metal atoms held together by weak interatomic forces Aggregates clusters complexes van der Waals molecules hydrogen bonded molecules etc are terms currently in use sometimes interchangeably while other times with well defined and mutually exclusive meanings The subjects of this volume are the free isolated van der Waals and hydrogen bonded molecules Owing to the present state of experimental knowledge these are mostly dimers i.e. entities formed by two strongly bound molecules an atom and a molecule or two atoms held together by the weak hydrogen bonding or the still weaker van der Waals forces Weakly bound complexes formed of more than two strongly bound sub units i.e. trimers tetramers etc are now coming within reach of experimental observation and several papers in this book deal with them The study of van der Waals and hydrogen bonded interactions has been pursued for several decades Most of these investigations have however dealt with systems in the condensed phase in which bulk effects are commingled with and therefore mask the weak binary interactions **Molecular Complexes** Robert S. Mulliken, Willis B. Person, **Molecular Complexes in Earth's Planetary, Cometary and Interstellar Atmospheres** Andrei A. Vigasin, Zdeněk Slanina, 1998 This book introduces systematically the concept of weakly bound complexes into the broad field of atmospheric sciences To fill up the gap between our rapidly expanding knowledge of the individual properties of Van der Waals and hydrogen bonded molecules and our understanding of their role in the atmospheric processes an ensemble of related topics are covered by a team of expert co-authors The general properties of the weakly bound molecular complexes or clusters are discussed as well as their distribution in the planetary atmospheres Collision induced and dimeric absorption and emission are considered in the context of atmospheric spectroscopy The advanced experimental techniques which enable us to study the spectroscopic features of molecular complexes in the gas phase or which are adsorbed are reviewed The role of molecular complexes in the cometary atmosphere the Earth mesosphere and the atmospheres of the giant planets and some of their satellites are also discussed in detail

Molecular Complexes Roy Foster, 1973 **Spectroscopy and Structure of Molecular Complexes** John Yarwood, 1974 **Crystalline Molecular Complexes and Compounds**, 2005 This book provides an account of the structure and

properties of crystalline binary adducts Such crystals are perhaps better known as molecular compounds and complexes and are estimated to make up one quarter of the world's crystals More than 600 figures 200 tables and 3500 references are included in the book **Handbook of High-resolution Spectroscopy** Martin Quack, Frederic Merkt, 2011-09-26 The field of High Resolution Spectroscopy has been considerably extended and even redefined in some areas Combining the knowledge of spectroscopy laser technology chemical computation and experiments Handbook of High Resolution Spectroscopy provides a comprehensive survey of the whole field as it presents itself today with emphasis on the recent developments This essential handbook for advanced research students graduate students and researchers takes a systematic approach through the range of wavelengths and includes the latest advances in experiment and theory that will help and guide future applications The first comprehensive survey in high resolution molecular spectroscopy for over 15 years Brings together the knowledge of spectroscopy laser technology chemical computation and experiments Brings the reader up to date with the many advances that have been made in recent times Takes the reader through the range of wavelengths covering all possible techniques such as Microwave Spectroscopy Infrared Spectroscopy Raman Spectroscopy VIS UV and VUV Combines theoretical computational and experimental aspects Has numerous applications in a wide range of scientific domains Edited by two leaders in this field Provides an overview of rotational vibration electronic and photoelectron spectroscopy Volume 1 Introduction Fundamentals of Molecular Spectroscopy Volume 2 High Resolution Molecular Spectroscopy Methods and Results Volume 3 Special Methods Applications *Studies of Molecular Complexes* Tze Chi Jao, 1974 **Zeolite-supported Molecular Complexes of Ruthenium and of Rhodium** Isao Ogino, 2010 *Molecular Association* William Ernest Stephen Turner, 1915 Practical methods for determining molecular weights Heinrich Biltz, 1899 **Molecular Complexes** Roy Foster, 1973 Our Solar System Frederick M. Tschirner, 1924 **Proceedings of the Cambridge Philosophical Society** Cambridge Philosophical Society, 1914 **Proceedings** Cambridge Philosophical Society, 1914 The Journal of Physiology, 1906 **The Chemical News and Journal of Industrial Science**, 1921 **Philosophical Magazine**, 1914
