Molecular Dissection Of Complex Traits:

Molecular Dissection of Complex Traits Andrew H. Paterson, 2019-09-17 In the past 10 years contemporary geneticists using new molecular tools have been able to resolve complex traits into individual genetic components and describe each such component in detail **Molecular Dissection of Complex Traits** summarizes the state of the art in molecular analysis of complex traits QTL mapping placing new developments in this Plant Functional Genomics Erich Grotewold, 2008-02-03 Functional genomics is a young discipline whose origin can be traced back to the late 1980s and early 1990s when molecular tools became available to determine the cellular functions of genes Today functional genomics is perceived as the analysis often large scale that bridges the structure and organization of genomes and the assessment of gene function The completion in 2000 of the genome sequence of *Arabidopsis thaliana* has created a number of new and exciting challenges in plant functional genomics The immediate task for the plant biology community is to establish the functions of the approximately 25 000 genes present in this model plant One major issue that will remain even after this formidable task is completed is establishing to what degree our understanding of the genome of one model organism such as the dicot *Arabidopsis* provides insight into the organization and function of genes in other plants The genome sequence of rice completed in 2002 as a result of the synergistic interaction of the private and public sectors promises to significantly enrich our knowledge of the general organization of plant genomes However the tools available to investigate gene function in rice are lagging behind those offered by other model plant systems Approaches available to investigate gene function become even more limited for plants other than the model systems of *Arabidopsis* rice and maize **Genotyping by Sequencing for Crop Improvement** Humira Sonah, Vinod Goyal, S. M. Shivaraj, Rupesh K. Deshmukh, 2022-03-28 OGENOTYPING BY SEQUENCING FOR CROP IMPROVEMENT A thoroughly up to date exploration of genotyping by sequencing technologies and related methods in plant science In **Genotyping by Sequencing for Crop Improvement** a team of distinguished researchers delivers an in depth and current exploration of the latest advances in genotyping by sequencing GBS methods the statistical approaches used to analyze GBS data and its applications including quantitative trait loci QTL mapping genome wide association studies GWAS and genomic selection GS in crop improvement This edited volume includes insightful contributions on a variety of relevant topics like advanced molecular markers high throughput genotyping platforms whole genome resequencing QTL mapping with advanced mapping populations analytical pipelines for GBS analysis and more The distinguished contributors explore traditional and advanced markers used in plant genotyping in extensive detail and advanced genotyping platforms that cater to unique research purposes are discussed as is the whole genome resequencing WGR methodology The included chapters also examine the applications of these technologies in several different crop categories including cereals pulses oilseeds and commercial crops **Genotyping by Sequencing for Crop Improvement** also offers A thorough introduction to molecular marker techniques and recent advancements in the technology

Comprehensive explorations of the genotyping of seeds while preserving their viability as well as advances in genomic selection Practical discussions of opportunities and challenges relating to high throughput genotyping in polyploid crops In depth examinations of recent advances and applications of GBS GWAS and GS in cereals pulses oilseeds millets and commercial crops Perfect for practicing plant scientists with an interest in genotyping by sequencing technology Genotyping by Sequencing for Crop Improvement will also earn a place in the libraries of researchers and students seeking a one stop reference on the foundational aspects of and recent advances in genotyping by sequencing genome wide association studies and genomic selection Genetic Improvement of Rice for Water-limited Environments Osamu Ito,J.
