Michael Goldsmith

Math Stuff:

Math Stuff William N. Bailey, 2000-12 A must read for teachers of mathematics The perennial question When will I ever use this stuff prompts a parent to look deeply into his son's math program In his search for the scope and meaning of stuff he finds that the subject of math is totally unlike any other high school subject Also apparent is that promoted reforms whether politically motivated profit driven or theoretically rooted in educational psychology good or bad generally have a poor long term success rate The semi fictional often humorous style of Math Stuff provides a multi dimensional view of the diverse elements of reform that to be effective must be jointly addressed Taking a cue from a good math teacher the book does not give the answers but rather suggests what to think about while determining them **Teaching Mathematics**

Conceptually Beth L. MacDonald, Jonathan N. Thomas, 2023-04-08 This book expands upon the guiding principles at the heart of Math Recovery instruction exploring their connections with learning theory practical application in the classroom and their wider links to agreed concepts of high quality mathematics teaching It provides a well rounded overview of all major aspects of mathematics teaching including inquiry based and constructivist approaches planning and assessment and strategies that offer children opportunities for reflection satisfaction and increasing challenge Particular focus is placed on equitable and inclusive practices in mathematics and how we can develop teaching that connects with the abilities cultures and lived experiences of all children This is essential reading for all teachers familiar with the Math Recovery approach and classroom mathematics teachers in elementary and primary schools everywhere seeking to enhance their own professional knowledge and understanding Beth L MacDonald is an associate professor in Early Childhood Mathematics Education in the School of Teaching and Learning at Illinois State University Jonathan N Thomas is an associate professor of mathematics education and the chairperson of the Department of STEM Education at the University of Kentucky *Math "Stuff" You've Forgotten* Mary Powell, 2001-06 **Eight Days in an Inner City School** Dan Golarz, 2008-12 This book is written primarily in an authentic dialogue style It fearlessly describes the consequences of the failure to appropriately prepare a student to become an inner city teacher While doing so the book also exposes a system that has been slammed to the ground by policies practices and court decisions that protect the rights of everyone except those who teach and those who desire to learn but leave these dedicated individuals constantly vulnerable to the violence anger hostility and hopelessness that seem to be a hallmark of so many of our inner city schools As this young teacher closes the classroom door and stands alone a stark picture emerges a picture that for the reader will provoke anger occasional outrage and most certainly controversy At the heart of this story the author reconstructs sometimes minute by minute the events and interactions that combine to compel him to leave this first teaching assignment abruptly with a profound sense of confusion self doubt and betrayal Not limited to the classroom this tale includes interludes that are informative occasionally humorous and sometimes amazingly frank But what becomes obvious is that the recounting of this experience reveals an open wound and is a plea to the reader to

recognize deep pain and justifiable anger In so doing it reflects the same quandary and frustrations that continue to be felt by millions of teachers and other educators who are frequently and severely criticized by those who simply do not understand why students and educators trapped in this environment so frequently fail to thrive and succeed and finally choose to leave
