Despite rich archives of work on race and the global economy most notably by scholars of colour and Global South intellectuals the discipline of Political Economy has largely avoided an honest confrontation with how race works within the domains it studies not least within markets By way of corrective this book draws together scholarship on the material function of race at various scales in the global political economy The collective provocation of the contributors to this volume is that race has been integral to the formation of capitalism as extensively laid out by the racial capitalism literature and takes on new forms in the novel market spaces of neoliberalism The chapters within this volume also reinforce that the current political conjuncture marked by the ascension of neo fascist power cannot be defined by an exceptional intrusion of racism nor can its racism be dismissed as epiphenomenal *Raced Markets* will be of great value to scholars students and researchers interested in political economy and racial capitalism as well as those willing to explore how race takes on new forms in the novel market spaces of contemporary neoliberalism The chapters in this book were originally published as a special issue of the *New Political Economy*      Construction Microeconomics Christian Brockmann, 2023-01-18

**CONSTRUCTION MICROECONOMICS** Unique and comprehensive reference describing microeconomic approaches theories and models adapted to and developed for the construction industry Construction Microeconomics provides comprehensive coverage of microeconomics applied to the construction industry focusing on construction clients who initiate construction projects and on contractors who transform the ideas and plans of clients into infrastructure and buildings With the help of microeconomic theory it tries to answer questions about decision making by clients contractors and governments with respect to projects in the built environment It includes discussions of alternative theories to mainstream microeconomics such as new institutional economics behavioral economics and the capability approach Applications from the construction sector including land supply sustainability industrialization and lean construction are provided to ground the theory in practical construction In Construction Microeconomics readers will learn How microeconomic theory relies heavily on assumptions for modeling and the nuances of adjusting those assumptions How heterogenous contract goods affect supply and demand markets information technology and accordingly the theories of contractors and owners How interaction influences the production process and how land as a production factor changes the production function How ex ante costs determine the cost theory of the contractor and why contracting is more akin to the service sector than the goods sector Advanced undergraduate and masters students lecturers and academics in construction and related disciplines and professionals in the construction industry looking for expert analysis into a unique facet of the field will find Construction

*Economics* David A. Kendrick,P. Ruben Mercado,Hans M. Amman,2011-10-23 The ability to conceptualize an economic  
 problem verbally to formulate it as a mathematical model and then represent the mathematics in software so that the model  
 can be solved on a computer is a crucial skill for economists Computational Economics contains well known models and some  
 brand new ones designed to help students move from verbal to mathematical to computational representations in economic  
 modeling The authors focus however is not just on solving the models but also on developing the ability to modify them to  
 reflect one s interest and point of view The result is a book that enables students to be creative in developing models that are  
 relevant to the economic problems of their times Unlike other computational economics textbooks this book is organized  
 around economic topics among them macroeconomics microeconomics and finance The authors employ various software  
 systems including MATLAB Mathematica GAMS the nonlinear programming solver in Excel and the database systems in  
 Access to enable students to use the most advantageous system The book progresses from relatively simple models to more  
 complex ones and includes appendices on the ins and outs of running each program The book is intended for use by  
 advanced undergraduates and professional economists and even as a first exposure to computational economics by graduate  
 students Organized by economic topics Progresses from simple to more complex models Includes instructions on numerous  
 software systems Encourages customization and creativity     Journal of Economic Literature ,2002     **Scientific**
