## **Mathematics Unbound: The Evolution of an International Mathematical Research Community, 1800-1945**

Karen Hunger Parshall,2002 Although today s mathematical research community takes its international character very much for granted this global nature is relatively recent having evolved over a period of roughly 150 years from the beginning of the nineteenth century to the middle of the twentieth century During this time the practice of mathematics changed from being centered on a collection of disparate national communities to being characterized by an international group of scholars for whom thegoal of mathematical research and cooperation transcended national boundaries Yet the development of an international community was far from smooth and involved obstacles such as war political upheaval and national rivalries Until now this evolution has been largely overlooked by historians andmathematicians alike This book addresses the issue by bringing together essays by twenty experts in the history of mathematics who have investigated the genesis of today s international mathematical community This includes not only developments within component national mathematical communities such as the growth of societies and journals but also more wide ranging political philosophical linguistic and pedagogical issues The resulting volume is essential reading for anyone interestedin the history of modern mathematics It will be of interest to mathematicians historians of mathematics and historians of science in general    **Science Progress in the Twentieth Century** ,1920    **The Twentieth Century Cyclopedia** ,1902    **The New Werner Twentieth Century Edition of the Encyclopaedia Britannica** ,1907    Encyclopaedia of the Social Sciences Edwin Robert Anderson Seligman,Alvin Saunders Johnson,1930    **American Men of Science** ,1949    **The United States Catalog** ,1925
