The Hybrid Systems workshops attract researchers interested in the modeling, analysis, control and implementation of systems which involve the interaction of both discrete and continuous state dynamics. The newest results and latest developments in hybrid system models, formal methods for analysis and control, computational tools as well as new applications and examples are presented at these annual meetings. The Sixth Workshop continued the series of workshops held in Grenoble France HART 97 Berkeley California USA HSCC 98 Nijmegen The Netherlands HSCC 99 Pittsburgh Pennsylvania USA HSCC 2000 Rome Italy HSCC 2001 and Stanford California USA HSCC 2002. Proceedings of these workshops have been published by Springer Verlag in the Lecture Notes in Computer Science (LNCS) series. This year we assembled a technical program committee with a broad expertise in formal methods in computer science, control theory, applied mathematics and artificial intelligence. We received a set of 75 high quality submitted papers. After detailed review and discussion of these papers by the program committee, 36 papers were accepted for presentation at the workshop and the final versions of these papers appear in this volume.    The Digital Patient C. D. Combs, John A. Sokolowski, Catherine M. Banks, 2015-12-11 A modern guide to computational models and constructive simulation for personalized patient care using the Digital Patient. The healthcare industry's emphasis is shifting from merely reacting to disease to preventing disease and promoting wellness. Addressing one of the more hopeful Big Data undertakings, The Digital Patient Advancing Healthcare Research and Education presents a timely resource on the construction and deployment of the Digital Patient and its effects on healthcare research and education. The Digital Patient will not be constructed based solely on new information from all the omics fields; it also includes systems analysis, Big Data and the various efforts to model the human physiome and represent it virtually. The Digital Patient will be realized through the purposeful collaboration of patients as well as scientific, clinical and policy researchers. The Digital Patient Advancing Healthcare Research and Education addresses the international research efforts that are leading to the development of the Digital Patient, the wealth of ongoing research in systems biology and multiscale simulation and the imminent applications within the domain of personalized healthcare. Chapter coverage includes The visible human, The physiological human, The virtual human, Research in systems biology, Multi scale modeling, Personalized medicine, Self quantification, Visualization, Computational modeling, Interdisciplinary collaboration. The Digital Patient Advancing Healthcare Research and Education is a useful reference for simulation professionals such as clinicians, medical directors, managers, simulation technologists, faculty members and
