

# 5 Different Types of Metal Forming Processes

## ROLL FORMING

Continuous operation in which a long strip of metal is passed through a series of pairs of rolls or stands until the desired cross-section profile is obtained.

## BENDING

Metal forming process in which applied forces deform a piece of metal. Once the metal has been bent, it can be planished, or smoothed out.

## EXTRUSION

Metal is forced through a die to create the desired shape. The process can be either hot or cold, depending on the type of metal being worked with.

## FORGING

This process involves shaping metal using localized compressive forces. The blows are delivered with a hammer or a die.

## DEEP DRAWING

Forming process that involves pressing a sheet metal blank into a die to create a three-dimensional shape.
