Materials For Hightemperature Superconductor Technologies Hc :

Materials for High-Temperature Superconductor Technologies: Volume 689 M. P. Paranthaman, 2002-04 Major advances in the years leading up to publication of this 2002 book in high temperature superconductor HTS research resulted in the increased use of HTS materials in commercial and precommercial applications These materials have in common the complexity of their multicomponent chemistry Consequently it is not surprising that many aspects of the interplay among microscopic structure macroscopic properties and processing are still not fully understood This book offers a comprehensive status review of high temperature superconductors from the near term commercialization of the first generation BSCCO tapes to the continuing advancement of the second generation YBCO coated conductors to the development of the new MgB₂ material Fundamental material properties studies new growth methods device and materials integration research and developments in designing and growing new materials all involving epitaxial superconducting thin films are featured

Scientific and Technical Aerospace Reports ,1992 Japan 21st ,1993 Superconductivity and Superconducting Materials Technologies P. Vincenzini, 1995 ***JPRS Report ,1993 Physics Briefs ,1992 High Temperature Superconductor Nb₃Ga***

L. J. Vieland, A. W. Wicklund, 1973 The discovery of superconductivity at 20.3 K in the Nb-Ga system by applying chemical vapor deposition CVD techniques to the materials preparation problem is reported. Films on ceramic substrates have been grown with superconducting onsets of up to 20.3 K Critical fields at 4.2 K in excess of 300 kG and alpha s of 1100 000 T A sq cm have been obtained. The results confirm that the outstanding properties of Nb-Ga are due to an equilibrium configuration of the system namely the stoichiometric A 15 compound Nb₃Ga which is stable at relatively low temperatures Practical materials preparation problems center on the codeposition of an adjacent Nb₅Ga₃ phase and the requirement that the deposition temperature be low Some ternary alloys were also prepared with part of the Ga replaced by Sn Sb Al or Ge
