Materials Performance Maintenance is a new discipline that is revolutionizing the way we approach materials management. It is a systems-oriented approach that emphasizes the need to understand the total system in which materials are used, from the source to the final product. This approach requires a multidisciplinary team of experts from various fields, including engineering, chemistry, physics, and economics. The goal of Materials Performance Maintenance is to ensure that materials are used in the most efficient and effective way possible, while also taking into account environmental factors and safety concerns. This symposium brings together leading experts in the field to share their knowledge and experience, and to discuss the latest developments in Materials Performance Maintenance.
