cybersecurity landscape is predicted to face a surge in new threat vectors that will be more sophisticated than ever before. One significant area of concern is the rising threat of ransomware attacks. Cybercriminals are continuously refining their methods targeting not only individuals but also critical infrastructure. The evolution of ransomware as a service model makes these attacks more accessible to non-technical criminals, increasing their prevalence. Organizations must remain vigilant, recognizing that these attacks will likely come with advanced evasion techniques that can bypass traditional security measures. Internet of Things (IoT) devices present another layer of emerging threats. As these devices become more integrated into daily life, they also create more entry points for attackers. Many IoT devices are designed with minimal security features, making them attractive targets for exploitation. For example, smart home devices may be used to launch DDoS attacks if compromised. It is essential for companies and individuals to prioritize the security of their interconnected devices to prevent potential breaches.
