**Dynamic Biological Systems** L. Finkelstein,1985      **Dynamics of Biological Systems** Michael Small,2011-08-25 From the spontaneous rapid firing of cortical neurons to the spatial diffusion of disease epidemics biological systems exhibit rich dynamic behaviour over a vast range of time and space scales Unifying many of these diverse phenomena Dynamics of Biological Systems provides the computational and mathematical platform from which to understand the underlying processes of the phenomena Through an extensive tour of various biological systems the text introduces computational methods for simulating spatial diffusion processes in excitable media such as the human heart as well as mathematical tools for dealing with systems of nonlinear ordinary and partial differential equations such as neuronal activation and disease diffusion The mathematical models and computer simulations offer insight into the dynamics of temporal and spatial biological systems including cardiac pacemakers artificial electrical defibrillation pandemics pattern formation flocking behaviour the interaction of autonomous agents and hierarchical and structured network topologies Tools from complex systems and complex networks are also presented for dealing with real phenomenological systems With exercises and projects in each chapter this classroom tested text shows students how to apply a variety of mathematical and computational techniques to model and analyze the temporal and spatial phenomena of biological systems MATLAB implementations of algorithms and case studies are available on the author s website      [National Library of Medicine Current Catalog](#) National Library of Medicine (U.S.),1988
