Mathematics Of Information Processing:

Mathematics of Information Processing Michael Anshel, William Gewirtz, 1986-12-31 These introductory survey lectures the result of a 1984 AMS Short Course focus on the algorithmic problems arising in the construction and utilization of large scale information systems Addressed to both mathematicians and computer scientists the lectures require a background in the methodologies of discrete mathematics in particular the elements of algebra combinatorics and graph theory discrete probability logic and the theory of computation All of the articles either are of high research value or survey profound themes in current research They cover the two fundamental aspects of the field i e database systems and communication networks An overview of database architectures the theory of data dependencies and transaction management are provided respectively by the articles of Jacobs Fagin and Vardi and Garcia Molina Chung evaluates problems in the design of communication networks Miller s discussion of data compression algorithms links current research to classical information theory Finally Tuzhilin describes a general framework evolved in the Soviet Union for modelling problems of information processing

Mathematics of Information Processing Michael Anshel, William Gewirtz, 2014-05-10 Features lectures that require a background in the methodologies of discrete mathematics in particular the elements of algebra combinatorics and graph theory discrete probability logic and the theory of computation This title covers the two fundamental aspects of the field database systems and communication networks

Theory of Neural Information Processing Systems Anthony C. C. Coolen, Reimer Kühn, Peter Sollich, 2005 This interdisciplinary graduate text gives a full explicit coherent and up to date account of the modern theory of neural information processing systems and is aimed at student with an undergraduate degree in any quantitative discipline e g computer science physics engineering biology or mathematics The book covers all the major theoretical developments from the 1940s to the present day using a uniform and rigorous style of presentation and of mathematical notation The text starts with simple model neurons and moves gradually to the latest advances in neural processing An ideal textbook for postgraduate courses in artificial neural networks the material has been class tested It is fully self contained and includes introductions to the various discipline specific mathematical tools as well as multiple exercises on each topic

Semendjaev,2013-11-11 *Resources in Education* ,1989 *Quantum Information Processing with Finite Resources* Marco Tomamichel,2015-10-14 This book provides the reader with the mathematical framework required to fully explore the potential of small quantum information processing devices As decoherence will continue to limit their size it is essential to master the conceptual tools which make such investigations possible A strong emphasis is given to information measures that are essential for the study of devices of finite size including Rnyi entropies and smooth entropies The presentation is self contained and includes rigorous and concise proofs of the most important properties of these measures The first chapters will introduce the formalism of quantum mechanics with particular emphasis on norms and metrics for quantum states This is necessary to explore quantum generalizations of Rnyi divergence and conditional entropy information measures that lie at the core of information theory The smooth entropy framework is discussed next and provides a natural means to lift many arguments from information theory to the quantum setting Finally selected applications of the theory to statistics and cryptography are discussed The book is aimed at graduate students in Physics and Information Theory Mathematical fluency is necessary but no prior knowledge of quantum theory is required
