MyLab™ or Mastering™ several versions may exist for each title and registrations are not transferable. You may need a Course ID provided by your instructor to register for and use MyLab or Mastering products. For courses in Intermediate Algebra, this package includes MyLab Math Active learning for active minds. The authors of the Mathematics in Action series believe that students learn mathematics best by actually doing the math within a realistic context. If a student is taking this course, why teach them the same content in the same way that they've already seen yet did not retain? Following this principle, the authors provide a series of guided discovery activities that help students to construct, reflect upon, and apply mathematical concepts, deepening their conceptual understanding as they do so. The active style of learning develops critical thinking skills and mathematical literacy while keeping the concepts in the context of real applications. The 6th Edition includes updated examples and activities for maximum interest and relevance along with new and enhanced digital resources in MyLab™ Math to support conceptual understanding for students wherever and whenever they need it. Personalize learning with MyLab Math. By combining trusted author content with digital tools and a flexible platform, MyLab personalizes the learning experience and improves results for each student.

**Mathematical Action & Structures of Noticing**, 2009-01-01. John Mason has been a prominent figure in the research field of mathematics education for several decades. His principal focus has been thinking about mathematical problems supporting those who wish to foster and sustain their own thinking and the thinking of others. Among the many markers of his esteemed career was the 1984 publication of *Thinking Mathematically* with Leone Burton and Kaye Stacey. It has become a classic in the field, having been translated into many languages and in use in countries around the world. *Thinking Mathematically* and other writings in his substantial body of work are used with advanced high school students, with pre-service and practicing teachers, and by researchers who are interested in the nature of doing and learning mathematics. This book is not, and at the same time is, a tribute to the enormous contributions made by Mason to mathematics education. It is not a tribute book because every chapter is a report of research and thinking by the authors, not simply a statement of appreciation. All engage with how others have taken Mason's ideas forward to extend their own research and thinking. At the same time, it is a tribute book. It is about how research and teaching has been inspired by Mason through his substantial opus and his vibrant presence in a network of mathematics educators.
