MathLand: Student resource book Linda Charles,1998      **Building a Positive Math Identity** Liesl

McConchie,2025-09-01 When brain science meets math success Emotions drive learning This is an essential component of understanding how a student s math identity is closely connected to their math success How a student sees themselves in relation to math is dynamically constructed in their brain and is constantly changing Every learner deserves to exist in harmony with mathematics This book shows you how to make that mantra a reality for all students Liesl McConchie offers an exciting new perspective on math identity through her extensive research on how the brain learns Liesl walks readers through cognitive neuroscience in a humorous and friendly way using metaphors and everyday stories to explain how emotions and cognition interact She offers engaging and simple brain based strategies and activities to implement in the classroom In Building a Positive Math Identity A Brain Science Approach Liesl Translates complex brain science principles for educators in an accessible and engaging way Provides practical exercises and lessons that you can use in classroom right away Shares real world stories that provide deeper insight into how math identity is shaped over the years Offers activities to help teachers gain insight into the math identities of our students Guides teachers to explore our own math identity and the impact it can have on our students Most important the book pushes back on the prevailing message about math identity that tends to focus on student efficacy alone This approach puts the burden on the individual which can lead to additional oppression of those who have been most marginalized in math Here s our opportunity as educators to reexamine what it means to have a positive math identity and to learn to use brain based tools to build on a positive math identity for our students from the earliest ages      Mathematics and Science Curriculum Programs ,2002      A Journey Through Math-Land

Reza Noubary,2021-11-02 If you look at math by eyes you see symbols by brain knowledge by heart truth and by soul God This book is about flying over math land enjoying the view and landing safely It seems inconceivable how much we rely on mathematics numbers in our daily lives and how natural it feels Our birth is announced by a set of numbers representing the time date and our height and weight We become a functioning member of society only after a Social Security number is assigned to us Our health and fitness are evaluated using numbers representing our blood pressure heart rate body temperature and so on From that point onward every action performed and every life encountered becomes part of our ongoing use of mathematics numbers This book traces applications of mathematics The goal is to find a way to delight readers about the discipline and open the door for them to see its beauty by presenting a variety of applications It is particularly useful for the individuals with some mathematics background or interests      *Mathland Student Book Grade 5*
