In The Black Tailed Prairie Dog John L Hoogland draws on sixteen years of research at Wind Cave National Park South Dakota in the United States to provide this account of prairie dog social behavior Through comparisons with more than 300 other animal species he offers new insights into basic theory in behavioral ecology and sociobiology Hoogland documents interactions within and among families of prairie dogs to examine the advantages and disadvantages of coloniality By addressing such topics as male and female reproductive success inbreeding kin recognition and infanticide Hoogland offers a broad view of conflict and cooperation Among his surprising findings is that prairie dog females sometimes suckle and at other times kill the offspring of close kin Enhanced by more than 100 photographs this book illuminates the social organization of a burrowing mammal and raises fundamental questions about current theory As the most detailed long term study of any social rodent The Black Tailed Prairie Dog will interest not only mammalogists and other vertebrate biologists but also students of behavioral and evolutionary ecology
