Crapitalism Jason Mattera, 2015-07-14 New York Times bestselling author and ambush journalist Jason Mattera sets his sights on his next big target crony liberals including Al Gore Carlos Slim Harry Reid and Jay Z whose riches come at taxpayer expense From billionaire business tycoons like George Soros and Warren Buffett to movie industry moguls like Jeffrey Katzenberg and Stephen Spielberg American liberals are using government breaks and shortcuts to pervert the free market These rich bastards leverage crony connections to bag millions for phony green companies that gobust vacuum public coffers to build glitzy stadiums utilize little known tax loopholes to loot 1.5 billion for Hollywood movies

and more They use government to rig the game in their favor and leave taxpayers holding the bill And when government gets in the business of picking winners and losers through bailouts and tax breaks free market competition begins to atrophy That's what big government leftists and corporate Republicans in name only want to happen In this explosive funny as hell investigative expos Mattera reveals the infuriating schemes that result when the filthy rich combine cronyism and capitalism Crapitalism pulls back the curtain on a cast of cronyites who make millions taking advantage of taxpayers and still brag about how they're looking out for the little guy **Hidden Agendas**, 2001 **Corporate accounting practices** United States.

Congress. House. Committee on Financial Services. Subcommittee on Capital Markets, Insurance, and Government Sponsored Enterprises, 2002 To Establish Justice for All Earl Johnson, 2013-11-12 For over a century many have struggled to turn the Constitution's prime goal to establish justice into reality for Americans who cannot afford lawyers through civil legal aid This book explains how and why American statesman Sargent Shriver called the Legal Services Program the most important of all the War on Poverty programs he started American Bar Association president Edward Kuhn said its creation was the most important development in the history of the legal profession Earl Johnson Jr a former director of the War on Poverty's Legal Services Program provides a vivid account of the entire history of civil legal aid from its inception in 1876 to the current day The first to capture the full story of the dramatic ongoing struggle to bring equal justice to those unable to afford a lawyer this monumental three volume work covers the personalities and events leading to a national legal aid movement and decades later the federal government's entry into the field and its creation of a unique institution an independent Legal Services Corporation to run the program The narrative also covers the landmark court victories the attorneys won and the political controversies those cases generated along with the heated congressional battles over the shape and survival of the Legal Services Corporation In the final chapters the author assesses the current state of civil legal aid and its future prospects in the United States *Protein Solubility and Aggregation in Bacteria* Salvador

Ventura, 2016-09-26 Proteins suffer many conformational changes and interactions through their life from their synthesis at ribosomes to their controlled degradation Only folded and soluble proteins are functional Thus protein folding and solubility are controlled genetically transcriptionally and at the protein sequence level In addition a well conserved cellular machinery assists the folding of polypeptides to avoid misfolding and ensure the attainment of soluble and functional structures When these redundant protective strategies are overcome misfolded proteins are recruited into aggregates Recombinant protein production is an essential tool for the biotechnology industry and also supports expanding areas of basic and biomedical research including structural genomics and proteomics Although bacteria still represent a convenient production system many recombinant polypeptides produced in prokaryotic hosts undergo irregular or incomplete folding processes that usually result in their accumulation as insoluble aggregates narrowing thus the spectrum of protein based drugs that are available in the biotechnology market In fact the solubility of bacterially produced proteins is of major concern in production processes

and many orthogonal strategies have been exploited to try to increase soluble protein yields. Importantly, contrary to the usual assumption that the bacterial aggregates formed during protein production are totally inactive, the presence of a fraction of molecules in a native-like structure in these assemblies endows them with a certain degree of biological activity, a property that is allowing the use of bacteria as factories to produce new functional materials and catalysts. The protein embedded in intracellular bacterial deposits might display different conformations, but they are usually enriched in β -sheet-rich assemblies resembling the amyloid fibrils characteristic of several human neurodegenerative diseases. This makes bacterial cells simple but biologically relevant model systems to address the mechanisms behind amyloid formation and the cellular impact of protein aggregates. Interestingly, bacteria also exploit the structural principles behind amyloid formation for functional purposes such as adhesion or cytotoxicity. In the present research topic, we collect papers addressing all the issues mentioned above from both the experimental and computational point of view.
